The soil is very fertile; but there are large tracts of uncultivated ground. The produce of the country is wheat, barley, saffron, honey, silk, salt, saltpetre, barilla, hemp, and sugar-canes, with the richest and most delicious fruits that are to be found in France and Italy; and its wines are in high esteem. Spain abounds in minerals and metals: cornelian, agate, jacinth, loadstone, turquoise-stones, quicksilver, iron, copper, lead, sulphur, gypsum, calamine, crystal, marbles of several kinds, porphyry, the finest jasper, and even diamonds, emeralds, and amethysts are found here. The principal rivers are the Donro, Tajo, Guadiana, Guadalquivir, Ebro, and Minho. The Spaniards in general are tall, their complexions swarthy, and their countenances expressive. In pride and listless indolence, it is commonly said, they pass their lives. Warm in their attachments, but bitter in their anger; firm in bodily suffering, yet cruel and vindictive in their revenge, there are still no people on the earth so attractive in the friendly intercourse of society; while the inexpressible beauty of the women, and the air of romance which they throw over every action, render their company as agreeable as it confessedly is dangerous. The bull-fight is the national game of Spain, and their passionate love of this spectacle almost exceeds belief. The established religion is Catholic. Madrid is the capital. In 1808 Napoleon attempted, by treachery and force, to subjugate this country; this led to the

Peninsular war, in which the British took so large a share, and which was carried on until 1813, when the allied forces crossed the Bidassoa, and entered France. The equator divides it into almost equal parts; the one extremity being in 3.35 N., the other in 5.56 S. lat. A chain of mountains runs through its whole extent; and between the ridges there are extensive plains, considerably elevated above the surface of the maritime lands. The inhabitants consist of Malays, Acheense, Battas, Lampoons, and Rejangs; the latter are taken as a standard of description with respect to the persons, manners, &c. of the Sumatrans. They are rather below the middle stature, have strong black shining hair, but no beard; and their complexion is yellow. A man may purchase as many wives as he may wish to have; but their number seldom exceeds

eight. The original natives are pagans; but when the Sumatrans, or any of the natives of the eastern islands, learn to read the Arabic character, and submit to circumcision, they are said to become Malays; the term Malay being understood to mean Mooselmin. Gold dust is, however, an article of considerable traffic, and is brought by merchants from the interior to the sea-coast, where it is bartered for iron tools and other articles of European manufacture. Among the vegetable products the most important is pepper, the quantity supplied by this island being, in fact, more than all the rest in the world. The principal lakes are those of Constance, Geneva, Lucern, Zurich, and Neuchatel; and the most considerable rivers are the Rhine, Rhone, Aar, Arve, Reuss, and Limmat. Among the wild animals of Switzerland are the bear, wolf, lynx, wild boar, chamois, ibex, deer, game of all kinds, the marmot, ermine, &c.; and the vegetable products include nearly all that are to be found elsewhere in Continental Europe. Thames, the principal river in Britain, and, in a commercial point of view, the most important in the world. Its two sources, the Chorn and Isis, are in Gloucestershire, and form their junction near Cricklade, Wilts, where it receives several rivulets, which cause it to widen considerably in its course to Lechlade; and, being there joined by the Coln and Lech, at the distance of 138 miles from London, it becomes navigable for vessels of 50 tons. At Oxford it is joined by the Charwell; at Abingdon, by the Ock; and at Dorchester by the Thame. Passing by Wallingford to Reading, it there receives the Kennet; and thence proceeds by Henley, Marlow, Maidenhead, Windsor, Staines, Chertsey, Kingston, and Brentford, in its course to London; during which it receives the Loddon, Coln, Wey, Mole, Brent, and Wandie. The surface exhibits only low rocky hills without any visible vegetation, and extensive arid plains, both of the most stern and stubborn aspect, promising as little as they produce. The country is politically divided into Wei and Tsang, or Hither and Farther Tibet, the former being that part bordering on China. The principal river is the Sanpoo; and it has several lakes, of which the largest is that of Terkiri, but the most remarkable is that of Palte. Here are many beasts of prey, and great abundance and variety of wild fowl and game; with numerous flocks of sheep and goats, and herds of cattle. The principal exports are gold, gold-dust, diamonds, pearls, lamb-skins, goats' hair, shawls, woollen cloths, rock-salt, musk, and tincal or crude borax. The Tibetians are governed by the grand lama, who is not only submitted to and adored by them, but is absolutely regarded as the Deity himself. Even the Emperor of China, who is of a Tartar race, does not fail to acknowledge the grand lama in his religious capacity, although, as a temporal sovereign, the lama himself is tributary to that emperor. The religion of Tibet, though in many respects it differs from that of the Indian bramins, in others has a great affinity to it. The Tibetians preserve entire the mortal remains of their sovereign lamas only; every other corpse is either consumed

by fire, or exposed to be the promiscuous food of beasts and birds of prey. They highly respect the water of the Ganges, whose source is deemed to be in heaven; Sagor and Jagernaut they esteem places of peculiar sanctity; and they reverence the city of Benares, as the traditional source both of their learning and religion.

Here are the ruins of a large castle, erected in the 11th century, by Richard, Earl of Clare: of this the entrance gate, two round towers, and part of the keep are still in tolerable preservation, and form a picturesque object on entering the town from Tunbridge Wells. Its more solid recommendation, however, is its excellent and liberally endowed grammar-school, founded in 1534, by Sir Andrew Judd, a native of the town (and Lord Mayor of London in 1551), which is under the government of the Skinners' company. In the vicinity is a strong chalybeate spring, and a manufacture of gunpowder.

It has long been resorted to on account of its chalybeate waters, discovered in 1603 by Dudley Lord North, who is said to have recovered from a deep consumption by drinking them. From that time it attracted the notice of the fashionable world, and was frequently honoured with the presence of royalty. Tunbridge Wells consists of several divisions, as Mount Ephraim, Mount Zion, Mount Pleasant, Calverley Park, the Wells, &c. There are excellent hotels, many good houses, pleasure-grounds, and gardens; and, as the country is naturally wild, the effect of the whole is romantic and picturesque.

The soil is but indifferent, except in the west, which is well watered by rivers. The chief productions are wheat, barley, oil, wool, wax, tallow, and a variety of fruits. The mountains near Tunis abound in silver, copper, and lead. In the woods and mountains are lions, bisons, ostriches, monkeys, roebucks, hares, pheasants, partridges, and other sorts of birds and beasts. The inhabitants are a mixture of Moors, Turks, Arabs, Jews, and Christians, merchants and slaves; and they carry on a great trade in linen and woollen cloth, Morocco leather, gold-dust, lead, horses, oil, soap, and ostrich eggs and feathers. The established religion is Mohammedanism. The capital, of the same name, is five miles in circuit, with a lofty wall, and has five gates and 35 mosques. Turcomania, a country of Independent Tartary, lying between the Caspian Sea and the Lake Aral. It is said to be extremely populous, and to yield abundance of corn. The Turcomans differ in religion from the Persians, who deem them infidels. They live in tribes, being subject to no particular governor; but each tribe chooses a nominal chief, who has no further authority among them than that of settling differences and arranging their civil economy. Their general characteristics are those common to all wandering nations; great hospitality within their own boundaries, and universal depredation abroad. Their horses are bought by the neighbouring nations at vast prices, which, with the sale among other tribes of their captives, and of their camels, sheep, &c., form the chief source of a Turcoman's wealth. The people live on corn, the flesh of horses, camels, and sheep, and the milk of mares and camels. They excavate a large hole in the ground, in which they make a fire; and, placing the meat in the embers, cover it up until it be baked. To the northward of Turcomania are the Kamchawks, who inhabit a desert, and are reported to be most ferocious and warlike, and hitherto unconquered. All these inhabit the eastern coast of the Caspian Sea.

Turkey, a large empire, extending over part of Europe, Asia, and Africa. *Turkey in Europe* contains part of Moldavia, Wallachia, Bulgaria, Servia, Bosnia, part of Croatia and Dalmatia, Romania, Macedonia, Albania, and Thessaly. *Turkey in Asia* includes the countries Irak, Diarbek, Kurdistan, Armenia, Roum, Karamania, Natolia, and Syria. *In Africa* the Turks claim Egypt, part of Nubia, and Barca; and the states of Tripoli, Tunis, and Algiers are under their protection. Of these countries [which see respectively], the climate, productions, manners, &c. must of course be various. The Turks are generally robust, well-shaped, and of a good mind. They are grave, sedate, and passive; but, when agitated by passion, furious, raging, and ungovernable; full of dissimulation, suspicious, and vindictive beyond conception; in matters of religion, tenacious, superstitious, and morose. They shave their heads, but

wear long beards, except those in the seraglio, and military men, who wear only whiskers. The national dress of the Turks is loose and flowing. The turban worn by the men is white, and never put off but when they sleep; and their clothes are long and full. They sit, eat, and sleep on the floor, on cushions, mattresses, and carpets. Their principal food is rice; and the frugal repast is followed by fruit and cold water, which are succeeded by hot coffee and pipes with tobacco. With opium they procure what they call a *kief*, or placid intoxication. Chess and draughts are favourite games; and the coffee-houses and baths furnish other sources of amusement. Polygamy is allowed among them; but the fair sex are kept under a rigorous confinement. The Turks believe in one God, and that his great prophet is Mohammed. Drinking wine is prohibited by this prophet in the Koran; and, instead of it, they generally use sherbet, a liquor made of honey, spices, and the juice of fruits. They expend great sums on caravansaries and fountains, for the refreshment of travellers and labourers, and are charitable toward strangers, let their religion be what it may; and no nation suffers adversity with greater patience. The Turks are excellent horsemen, and throw the *djerid* or lance with the greatest dexterity; but, excepting this exercise and that of wrestling, they indulge in no active exertion. They never even dance themselves, but enjoy public dances, the performers in which, however, they reckon infamous. Laziness and apathy, indeed, are their distinguishing characteristics. "There is nothing in which they take so much delight as in reclining in the shade from sunrise to sunset, apparently in a state of total indifference, occasionally sipping coffee, and inhaling the fumes of tobacco. Whatever may be their object, they saunter through the streets with the same measured and monotonous step. They converse little, and the presumption is that their mind is as indolent as their body." In European Turkey, Constantinople, Adrianople, and Salonica are the chief centres of trade; in Asiatic Turkey, Smyrna and Aleppo are the principal. All foreign articles may be imported into the Turkish ports, on payment of a very small duty; and all articles of foreign and domestic growth or manufacture may be freely conveyed over the empire: but the internal traffic of Turkey is greatly impeded by the badness of the roads. The government of Turkey is a pure despotism: the Grand Signior is absolute master of the lives and goods of his subjects; and it has been well observed, "all the agents of a despot are despots in their peculiar sphere."

Many parts of this duchy are fruitful in corn and wine, and produce plenty of citrons, oranges, pomegranates, and other fruits; but agriculture is in a very backward state, and every species of cultivation, except that of wheat, vines, and olives, is neglected. The inhabitants are distinguished by their attachment to commerce, and have established various manufactures, particularly of silks, stuffs, earthenware, and gilt leather; also iron and copper foundries, hardware factories, and paper mills. United States (of America), a federal republic of North America, founded in 1783. It then consisted of thirteen states; namely, Massachusetts, New Hampshire, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia. The following eleven have since been formed, and united to them: Maine, Vermont, Ohio, Indiana, Illinois, Kentucky, Tennessee, Alabama, Mississippi, Louisiana, and Missouri. There are also the North-West and Michigan territories, the country of Florida, and the Missouri and Arkansas territories (including the remainder of the country of Louisiana), which belong to the United States. A short account of these districts will be found

under their respective heads. No part of the globe is so well supplied with rivers, and great and small lakes, as the United States; and a great multitude of bays and excellent harbours are on the coast of every maritime state. The federal republic is governed by a congress, consisting of a president, vice-president, senate, and house of representatives. Every state has its own governor, constitution, and laws, for its distinct government; and each sends a proportionate number of representatives to the congress. In the United States there is no religious establishment supported by the ruling power. The judicial part of the constitution nearly corresponds with that of England. The army and navy of the United States are on a formidable scale; their numerous trading vessels visit every coast, without regard to distance or danger; and their internal trade flourishes by means of extensive navigable rivers, and the occasional aid of canals. The United States, in 1812, entered into a war against Britain, which was carried on by sea and land, with variable success on both sides, to its termination by a treaty of peace, signed at Ghent, in 1814. Philadelphia was the seat of government till the end of 1800, when the city of Washington became the metropolis.

Before the discovery of the Cape of Good Hope by the Portuguese, in 1486, it was one of the most powerful, commercial, and maritime states in Europe; but it is now reduced from the highest splendour to comparative insignificance. The Venetians are lively and ingenious, extravagantly fond of amusements, with an uncommon relish for humour. They are in general tall, well made, and of a ruddy brown colour, with dark eyes. The women have expressive features, and an easy, engaging address. Whatever degree of licentiousness may prevail among them, jealousy, poison, and the stiletto have been long banished from their gallantry. The common people display some qualities very rarely to be found in that sphere of life, being remarkably sober, obliging to strangers, and gentle in their intercourse with each other.—The capital of this territory is a superb city of its name, standing on a cluster of small islands, in a kind of lake, separated from the Gulf of Venice by some islands at a few miles' distance. The churches and convents are numerous, and rich in paintings; indeed, Venice, highly renowned for valuable works of this kind, far surpasses, in this respect, even Rome itself. The ducal palace is an immense building; and the bank is supposed to be the first of the kind in Europe. In this city a famous carnival is held from Christmas till Ash-Wednesday; in all which time libertinism reigns, and thousands of foreigners frequent it from all parts of Europe. The chief diversions are riddotts and masquerades; and St. Mark's Place is the general rendezvous. Pop. nearly 100,000.

The next region is a scene of perfect devastation, furrowed on all sides with streams of lava, extended in wide black lines over the surface. The upper part is covered almost entirely with ashes, and extremely difficult of ascent. The top of this is a narrow ledge of burnt earth or cinders, nearly two miles in circuit, with the crater open beneath, about 350 feet in depth. The eruption of *Vesuvius* in the year 79, in the time of Titus, was accompanied by an earthquake that overturned several cities, particularly Pompeii and Herculaneum, and proved fatal to Pliny the naturalist. Another violent eruption, in 1631, totally destroyed the town of Torre del Greco; and, in that of 1794, the lava flowed over 5000 acres of cultivated land, and Torre del Greco was again destroyed.

Vincent, St., one of the W. India Islands, belonging to Great Britain, lying 55 miles to the west of Barbadoes. It is inhabited by Caribs, a warlike race of Indians, between whom and the aborigines of the larger islands there is a manifest distinction. In their wars they adhere to the practice of destroying all the male prisoners, and preserving the women either for servitude or for breeding. St. Vincent is extremely fertile for the raising of sugar and indigo; and bread-fruit trees, brought from Otaheite, thrive remarkably well. A ridge of mountains passes along the middle, through its whole length, the highest of which, called Scouffrier, is at the north extremity. From this mountain, in 1812, after the lapse of nearly a century, proceeded a dreadful eruption, by which the island was enveloped in a chaotic gloom for three days, and wholly covered by showers of volcanic matter.—One of the Cape-Verd Islands, 30 miles in circuit and uninhabited. The principal rivers are the James, York, Rappahannoc, Roanoke, and Potomac, which are full of convenient harbours. The land toward the mouths of the rivers is low, and fit for rice, hemp, and maize; that higher up is generally level, and watered by springs; and between the ridges of the mountains are long and fertile valleys. The richest lands lie near the branches of the rivers, and abound with various sorts of timber, surprisingly large. The principal produce is tobacco, wheat, and maize. Wales, a principality in the west of England, 120 miles long and 60 broad, containing 7,425 square miles, or 4,752,000 acres. It is divided into North and South Wales, each containing six counties; namely, Anglesey, Caernarvon, Denbigh, Flint, Merioneth, and Montgomery, in North Wales; Brecknock, Cardigan, Caermarthen, Glamorgan, Pembroke, and Radnor, in South Wales. To this country the ancient Britons fled, when England was invaded by the Saxons. They are now called Welsh, and continue to preserve their own language. They were long governed by independent kings, till the reign of Edward I., when their last prince, Llewelin, being vanquished and slain, in 1283, the country was united to England. The natives submitted to the English dominion with extreme reluctance; and Edward, as a conciliatory measure, promised to give them for their prince a Welshman by birth, and one who could speak no other language. Accordingly, he invested his second son, Edward, then an infant, who had been born at Caernarvon. The death of his eldest son, Alphonso, happening soon after, young Edward became heir, also, of the English monarchy, and united both nations under one government. From the time of Edward II., the eldest son of the king of England has always been created Prince of Wales. The country is mountainous, but not barren, producing all the necessaries of life; the cattle and sheep are numerous, but small, and it is particularly famous for goats. It is watered by many rivers, the principal of which, and other particulars, are noted in our account of the different counties. The rearing of stock is the most important branch of husbandry, and iron is the principal mineral product. [See *England*.]

Captain Philip, governor of the intended settlement, arrived with his colony at this bay early in 1788; but, finding it ineligible, he fixed upon Port Jackson, 13 miles further to the north; and here a settlement was begun, to which he gave the name of Sydney Cove. With respect to the adjoining country, a long chain of lofty hills, named the Blue Mountains, about 49 miles inland, runs nearly in a north and south direction; along the skirt of which the river Nepean flows north to the

Hawksbury. The general face of it is diversified with gentle risings and small winding valleys, covered with large spreading trees, and a variety of flowering shrubs. The heat is never excessive in summer, nor the cold intolerable in winter; storms of thunder and lightning are frequent, but the atmosphere is generally bright and clear. The quadrupeds are principally of the opossum kind, of which the most remarkable is the kangaroo. There are many beautiful birds of various kinds; several species of serpents, large spiders, and scolopendras; and many curious fishes. The natives of this coast are represented as a most savage race. They go entirely naked, paint their bodies with various colours, and ornament themselves with beads and shells; they are active, vigorous, and stout; the women have soft and pleasing voices, and seem not to be destitute of modesty. Most of the men are without one of the fore-teeth in the upper jaw; and it is common for the women to cut off two joints of the little finger. Of the cultivation of the ground they have no notion; and they depend for subsistence on the fruits and roots they gather, and the animals and fish they catch; the latter is the principal part of their subsistence. Their canoes are nothing more than large pieces of bark tied up at both ends with vines; and, considering their slight texture, the dexterity with which they are managed, and the boldness with which they venture out to sea in them, they are wonderful. Their huts consist of pieces of bark laid together in the form of an oven, open at one end, very low, but long enough for a man to lie at full length. They are very expert at throwing their javelins, and will hit a mark at a considerable distance. The jealousy of the Europeans which originally existed, has now entirely vanished; and the proximity of a civilized colony has, in some degree, tended to soften their native rudeness and barbarism. The British settlement at Sydney has continued to flourish and extend from its first establishment, and is now become nearly independent of the mother country for all the necessaries of life. Iron and coal, both of a very fine quality, are found in abundance; but the most prizeable objects yet discovered are valuable stones, of which the white and yellow topazes are of greater worth than those produced in Brazil.

In this cathedral also is the marble coffin of William Rufus. On a fine eminence stood the castle, which was taken from Charles I., and afterwards demolished, except the magnificent hall, in which the assizes are now held. On the site of the castle Charles II. erected a palace, which, as it never was completed, was subsequently converted to other uses, and for nearly half a century past has served as infantry barracks, Winchester being well situated for a military dépôt. Here, also, is St. Mary's College, founded by William Wykeham,

IV., Henry VII., Henry VIII., and Elizabeth; and George III. contributed much to its improvement, made it his chief residence, and died here in 1820. St. George's Chapel, or the collegiate church, stands between the two courts; it was begun by Edward III. and finished by Henry VII.; the interior architecture is greatly admired, particularly its stone roof. In this chapel are interred Henry VI., Edward IV., Henry VIII., his queen, Jane Seymour, and Charles I. And at the east end a large vault was constructed in 1810, by order of George III., as a place of sepulture for himself and his family. The principal and most magnificent entrance to the castle is on the south, by the gateway of George IV., between the York and Lancaster Towers. St. George's Hall, the banqueting room of the Knights of the Garter, is 200 feet in length, with an arched ceiling divided into compartments and panels, in which are nearly 700 shields, with the arms of the knights emblazoned on them; and at the east end is the throne, under a rich canopy. York, a city, the capital of Yorkshire, and an archbishop's see. It was the Eboracum of the Romans, at that time the first city in Britain, and continued in great power till the time of William I., by whom it was destroyed, after having surrendered to him through famine. York never afterwards attained its former elevation of grandeur; and although in point of rank it is still deemed the second city in the kingdom, yet in consequence of the rise of Liverpool, Manchester, &c., and the increasing importance of many of the large towns of Yorkshire, in population and commercial prosperity the old city has lost its former station. The cathedral called the Minster, as a specimen of ecclesiastical architecture, is justly esteemed the glory of Great Britain, and is generally reckoned the largest and most magnificent Gothic structure in the world. In 1629 it was set on fire, and in part destroyed, by a lunatic; but a liberal subscription being entered into for its repair, it was restored to its former state of architectural beauty. As though doomed to suffer from the devoting element, another destructive fire broke out on the 20th of May, 1840, in the SW. tower, by which its fine ring of 10 bells and the clock, with part of the roof of the nave, were burnt: that injury, however, has also been repaired, and the magnificent edifice again appears in all its original grandeur. Besides the cathedral, York contains 17 churches in use; though in the reign of Henry V. there were 44 parish churches, 17 chapels, and nine religious houses. The castle, which was formerly a place of great strength, is now a county prison for debtors and felons. Near it, on an artificial mount, is Clifford's Tower, a round shell, said by some to have been raised by William I., but others deem it a Roman work. York is a county of itself, including Ainsty Liberty, in which are 35 villages and hamlets. The guildhall, built in 1446, is a grand structure, supported by two rows of oak pillars, each pillar being the stem of a single tree; and among the modern buildings are a noble assembly-house, designed by the Earl of Burlington; a museum, an elegant court-house, on the right of the castle; a theatre-royal, a county hospital, and an asylum for lunatics. Lon. 1.7 W., lat. 53.59 N. Pop. 28,842.—A town of Pennsylvania, capital of a fertile county. Lon. 76.42 W., lat. 39.58 N.—A sea-port of Maine, capital of a county. York, New, one of the United States of America, averaging in length and breadth about 300 miles each. It is divided into 55 counties; and a large portion of fine land, in this great manufacturing state, yet remains to be settled. Beyond the Alleghany Mountains the country is quite level, of a fine rich soil, covered with various kinds of trees. East of these mountains it is broken into hills and valleys: the hills are thickly clothed with timber, and, when cleared, afford fine pasture; and the valleys produce hemp, flax, peas, grass, oats, maize, and wheat. The metallic productions are iron, tin, lead, and plumbago. This state abounds with fine lakes; and it has numerous rivers, the chief of which are the Hudson, Mohawk, St. Lawrence, and

Delaware. Total pop. 2,428,921.—Its capital is a city of the same name, surrounded on all sides by water. Here are numerous churches and meeting-houses, and a noble seminary of education, called Columbia College; but the chief edifice is Federal Hall, in the front of which is a deep gallery, where the illustrious Washington took his oath of office, at the commencement of the federal constitution, in 1789; also, a large state prison, numerous commercial and charitable institutions, literary establishments, &c. The markets are abundantly supplied with every thing in its season, that land and water afford. This city, in time of peace, has more commercial business than any other in the United States; but in time of war it is insecure without a maritime force. Lon. 73.56 W., lat. 40.40 N. Pop. 312,710.

Yorkshire, the largest county in England, extending 90 miles from north to south, and 115 from east to west, and containing 3,669,510 acres. From its great extent it has been divided into three ridings, called the North, East, and West; which are subdivided into 26 wapentakes and 634 parishes, with one city and 60 market-towns. The air and soil of this extensive county vary extremely. On the hilly parts of the East Riding, especially in what is called the York Wolds, the soil is generally barren, dry, and sandy. The West Riding, which is much the largest, enjoys a sharp but healthy air, and the land on the western side is hilly, stony, and not very fruitful; but the intermediate valleys consist of much good arable ground, and excellent pasture for cattle, horses, and sheep. It also produces iron, coal, lime, jet, and alum. This is essentially the manufacturing district; Leeds, Bradford, Halifax, Huddersfield, and Wakefield being the great seats of the woollen manufacture, and Sheffield rivaling the hardware manufactories of Birmingham. The North Riding, in general, exceeds the other two in the salubrity of the air. The worst parts breed lean cattle; but, on the sides of the hills, in the valleys and plains, it produces good corn, and rich pasture for large cattle. In Yorkshire, likewise, are the districts of Uoldderness, on the borders of the Humber; Cleveland, on the confines of Durham; and Craven, on the borders of Westmoreland and Lancashire. In this last district are three high mountains, named Wharfedale, Ingleborough, and Pennycant; they form a sort of triangle from their tops, at the distances of about 5, 6, and 8 miles, while their bases nearly unite. The principal rivers are the Ouse, Aire, Don, Derwent, Calder, Wharfe, Nidd, Ure, and Hull, and they all terminate in the Humber, which enters the German Ocean, between Yorkshire and Lincolnshire. Total pop. 1,591,460.

It was discovered by Tasman in 1642, and circumnavigated by Cook in 1770, who found it to consist of two large islands and numerous small ones, separated by a strait four or five leagues broad, to which he gave his own name. On the west side of this strait, and at the north end of the southern island, is Queen Charlotte Sound, which was a place of rendezvous in his subsequent voyages. The coasts are indented by deep bays, and there are also several rivers capable of receiving large vessels. The southernmost island is for the most part mountainous and barren, as far inland as the eye can reach; but the land bordering on the sea-coast is thickly clothed with wood. The northernmost island has a much better appearance; for the hills and mountains are covered with wood, and every valley has a rivulet of excellent water. The soil of these valleys, and the plains, of which there are many overgrown with wood, is in general light, but fertile. There are forests of vast extent, full of straight and large trees. Wild celery and a kind of cresses grow plentifully in almost every cove. Yams, sweet potatoes, and coconos, are raised by cultivation. The only quadrupeds were dogs and rats; but various animals have since been introduced from Europe. The birds, like the vegetable productions, are almost entirely peculiar to the country. The men are stout, well made, and fleshy; but none of them corpulent, like the inhabitants of Otaheite; and they are exceedingly vigorous and active. The women possess peculiar grace of form and person. The bodies of both sexes are marked with black stains, called amoco, which is the same as tattooing at Otaheite. They

ornament their heads with feathers, pearlshells, bones, &c. Their houses are miserable lodging-houses; and their only furniture is a few small baskets, in which they put their fishing-hooks and other trifles. Their food consists chiefly of fish; and instead of bread they eat the root of a kind of fern, which they scorch over the fire, and then beat with a stick till the dried outside falls off. They have a faint sense of religion, and believe in a multitude of deities; but the Christian missionaries have made some converts among them. In January, 1840, New Zealand was constituted a colony dependent on New South Wales; but in April, 1841, it was separated from it, and placed under a governor, with a colonial secretary, and other officers. * The Isle of Wight, though considered as a part of Hampshire, was made independent of it in 1832. The Isle of Man, the Norman Isles, the Scilly Isles, and Berwick-upon-Tweed, are dependencies of the crown of England, not attached to any county. Berwick, however, is represented in the Imperial Parliament, and subject to the laws and supreme courts of England; the Isle of Man and the Norman Isles have laws, legislatures, and judiciary establishments of their own.

This raised his resentment; and, when the Romans had received a present of corn from Gelo, king of Sicily, he insisted that it should be sold for money, and not distributed gratis. His imprudent advice provoked the people, who wished him to be put to death; but this rigorous sentence was prevented by the influence of the senators, and he was banished. Coriolanus retired among the Volsci to Attius Tullus, his greatest enemy, from whom he met a friendly reception. Attius advised him to declare war against Rome, and Coriolanus marched at the head of the Volsci as general. His approach greatly alarmed the Romans, and they sent several embassies to reconcile him to his country, and solicit his return; but he was deaf to all proposals, and bade them prepare for war. He pitched his camp at the distance of five miles from the city; and his enmity against his country would have proved fatal, had not his wife, Volumnia, and his mother, Veturia, been prevailed upon by the Roman matrons to go and appease his resentment. He frequently ran up the steepest and most uneven walks, where his voice acquired force and energy; and he used to declaim aloud on the sea-shore, when the waves were violently agitated, to accustom himself to the noise and tumults of a public assembly. His abilities as an orator raised him to consequence at Athens, and he was soon placed at the head of the government. His triumph and popularity were, however, short; for, when Antipater made war against Greece, he demanded all the orators to be delivered up to him; and Demosthenes, seeing that all hopes of safety were banished, took a dose of poison, which he always carried in a quill, and expired in his 69th year.

The Gorgons resided in the inland parts of Lybia, near the Lake of Triton, or the gardens of the Hesperides. Perseus rendered his name immortal by the conquest of Medusa. He cut off her head, and the blood that dropped from the wound produced the innumerable serpents that infest Africa; the horse Pegasus also arose from the blood of Medusa, as did Chrysaor, with his golden sword. Perseus, after performing wonderful exploits with the head of Medusa, placed it on the ægis of Minerva, which he had used in his expedition, and it still retained the same petrifying power as before.

Hercules, a celebrated hero; who, after death, was ranked among the gods, and received divine honours. He was the son of Jupiter and Alcmena; and his birth was attended with many supernatural events. In his 18th year he delivered the neighbourhood of Mount Cithæron from a huge lion, and released his country from the annual tribute

of an hundred oxen, which it paid to Erginus, king of Orchomenos. As Hercules, by the will of Jupiter, was subjected to the power of Eurystheus, his brother, king of Argos, and obliged to obey him in every respect, Eurystheus ordered him to appear at Mycenæ, and perform whatever labours he should impose upon him. Hercules refused; but afterwards consulted the oracle of Apollo, and was told that he must be subservient for twelve years to the will of Eurystheus. He therefore repaired to Mycenæ, determined to bear with fortitude whatever gods or men imposed upon him. Eurystheus commanded him to achieve a number of enterprises the most difficult and arduous ever known, generally called the Twelve Labours of Hercules; which were as follows:—1. He was to kill the lion of Nemea, which ravaged the country near Mycenæ. The hero boldly attacked him with his club, pursued him to his den, and, after a sharp engagement, choked him to death. He then carried the dead beast on his shoulders to Mycenæ.—2. To destroy the Lernaean hydra, which, according to Diodorus, had 100 heads.—3. To bring alive and unhurt into the presence of Eurystheus a stag, famous for its incredible swiftness, its golden horns, and brazen feet. In the accomplishment of this task Hercules was a whole year occupied; but he at length caught the stag in a trap.—4. To bring alive a wild boar which ravaged the neighbourhood of Erymanthus.—5. To clean the stables of Augias, where 3000 oxen had been confined for many years.—6. To kill the carnivorous birds which infested the country near the Lake Stympthalis, in Arcadia.—7. To bring alive a prodigious wild boar which laid waste the island of Crete.—8. To obtain the mares of Diomedes, which fed upon human flesh.—9. To obtain the girdle of the queen of the Amazons.—10. To kill the monster Geryon, king of Gades, and bring to Argos his numerous flocks, which lived upon human bodies.—11. To gather apples from the garden of the Hesperides.—12. This was the last and most dangerous of his exploits, in which he was commanded to bring upon earth the three-headed dog, Cerberus. Hercules descended into hell by a cave on Mount Tanarus, seized the monster, whom he carried before Eurystheus; and afterwards conveyed him back. Besides these arduous labours, Hercules achieved a number of others, of his own accord, equally great and wonderful.—Such are some of the most striking characteristics of the life of Hercules, who is said to have supported for a while the weight of the heavens upon his shoulders, and to have separated by the force of his arm the celebrated mountains which were afterwards called the boundaries of his labours. Pelias consented to abdicate the crown, provided Jason would undertake an expedition against Æetes, king of Colchis, who had murdered their common relation, Phryxus. Jason

accordingly embarked on board a ship called *Argo*, accompanied by the youngest and bravest of the Greeks; and, after a series of adventures, arrived at *Colchis*. *Æetes* promised to restore the golden fleece, which was the cause of the death of *Phryxus*, and of the voyage of the *Argonauts*, provided they submitted to his conditions. Jason was to tame bulls which breathed flames, and had feet and horns of brass, and to plough with them a field sacred to *Mars*. After this he was to sow in the ground the teeth of a serpent, from which armed men would arise, whose fury would be converted against him who ploughed the field. He was also to kill a monstrous dragon, who watched day and night at the foot of the tree on which the golden fleece was suspended. All these labours were to be performed in one day; but *Medea*, the king's daughter, whose knowledge of herbs, magic, and potions, was unparalleled, easily extricated Jason from all dangers, to the astonishment and terror of his companions, and of *Æetes* and the people of *Colchis*, who had assembled to be spectators of these wonderful actions. Jason tamed the bulls with ease, ploughed the field, sowed the dragon's teeth, and, when the armed men sprang from the earth, he threw a stone in the midst of them, and they immediately turned their weapons one against the other till they all perished. He next went to the dragon, and, by means of enchanted herbs, given him by *Medea*, he lulled the monster to sleep, and took from the tree the celebrated golden fleece, which was the sole object of his voyage. Jason then set sail for *Europe* with *Medea*, whom he had married; and, after numerous disasters, arrived safely in *Thessaly*. This expedition has been much celebrated in the ancient ages of the world, and has employed the pens of many writers. The senators listened to his complaints, but the gold of *Jugurtha* prevailed among them; and the suppliant monarch, forsaken in his distress, perished by the snares of his enemy. *Metellus* was at length sent against *Jugurtha*, and his firmness and success soon reduced the crafty *Numidian*, and compelled him to retire among his savage neighbours for support. *Marius* and *Sylla* succeeded *Metellus*, and fought with equal advantage. *Jugurtha*, who had claimed assistance from his father-in-law, *Bochus*, king of *Gordulia*, was betrayed by him, and delivered into the hands of *Sylla*, after carrying on a war of five years' duration. He was exposed to the view of the Roman people, and dragged in chains to adorn the triumph of *Marius*; and afterwards put in a prison, in which he died of hunger. The name and wars of *Jugurtha* have been immortalized by the pen of *Sallust*. B. C. 106.

Julianus, a son of *Julius Constantius*, the brother of *Constantine the Great*, born at *Constantinople*. In his youth he was taught the doctrines of the Christian religion, and exhorted to be modest and temperate; but he soon afterwards showed his dislike for Christianity, by secretly cherishing a desire to become one of the votaries of Paganism, and applied himself to the study of magic and astrology. About the 26th year of his age, he was appointed by *Constans* over *Gaul*, with the title of *Cæsar*; and he distinguished himself by his prudence, valour, and

the numerous victories he obtained over the enemies of Rome in Gaul and Germany. His mildness and condescension gained him the hearts of his soldiers; and when Constans, to whom Julian was become suspected, ordered him to send him part of his forces, for the eastern provinces, the army mutinied and refused to obey the mandate of the emperor. They compelled Julian to accept the title of independent emperor and of Augustus; and the death of Constans, which shortly afterwards happened, left him sole master of the Roman empire. Julian then disclosed his religious sentiments, and publicly disavowed the doctrines of Christianity. After he had made his public entry into Constantinople, he determined to continue the Persian war; and, when he had crossed the Tigris, he destroyed his fleet, and advanced into the enemy's country. He was, however, obliged to retire; and he marched up the sources of the river, determined to imitate the bold return of the 10,000 Greeks. As he advanced through the country, he defeated the officers of Sapor, king of Persia; but an engagement proved fatal to him, and he received a deadly wound while animating his soldiers. The last moments of Julian were spent in a conversation with a philosopher concerning the immortality of the soul; and he died without showing any sorrow for his fate, or the suddenness of his death.

Saturn had received the kingdom of the world from his brother, Titan, on condition of not raising male children; and he therefore devoured all his sons as soon as born;—but Ops, offended at her husband's cruelty, secreted Jupiter, and gave a stone to Saturn, who swallowed it, thinking it a male child. Jupiter was brought up in a cave on Mount Ida, in Crete, and fed upon the milk of a goat. As soon as he was a year old, he was sufficiently strong to make war against the Titans, who had imprisoned his father; they were conquered, and Saturn set at liberty. Saturn, however, apprehensive of the power of his son, conspired against his life, and was for this treachery driven from his kingdom. Jupiter now became sole

master of the empire of the world, and divided it with his brothers; reserving for himself the kingdom of heaven, and giving the empire of the sea to Neptune, and that of the infernal regions to Pluto. The beginning of his reign was interrupted by the rebellion of the giants, sons of the earth, who strove to revenge the death of their relations, the Titans. Jupiter, however, with the assistance of his son Hercules, totally overpowered and scattered his gigantic foes; and, being now freed from every apprehension, he gave himself up to the pursuit of pleasure. He married Metis, Thetis, Euronyme, Ceres, Mnemosyne, Latona, and Juno; and became a Proteus to gratify his passions. He introduced himself to Danae in a shower of gold; he corrupted Antiope in the form of a satyr, and Leda in the form of a swan; he became a bull to seduce Europa, and he enjoyed the company of Ægina in the form of a flame of fire; he assumed the habit of Diana to corrupt Callisto, and became Amphitryon to gain the affections of Alcmena. The worship of Jupiter was universal, and surpassed that of the other gods in solemnity; he was the Ammon of the Africans, the Belus of Babylon, the Osiris of Egypt, &c. From him mankind received their blessings and their miseries, and they looked upon him as acquainted with every thing, past, present, and future.

He first signalized himself under Scipio at the siege of Numantia; and next passed into Africa against Jugurtha, king of Numidia, whom he defeated. Marius then returned to Rome, where new honours and fresh trophies awaited him. The provinces were suddenly invaded by an army of 300,000 barbarians, and Marius was the only man whose activity and boldness could resist so powerful an enemy. He was, therefore, elected consul, and sent against them; two battles were fought; and 200,000 of the enemy were slain, and 90,000 made prisoners. The following year was also marked by the total overthrow of the Cimbræ, another horde of barbarians, in which 140,000 were slaughtered by the Romans, and 60,000 taken prisoners. After these glorious victories, Marius, with his colleague, Catulus, entered Rome in triumph; but his restless ambition began to raise seditions, and to oppose the power of Sylla. This produced a civil war. Sylla refused to deliver up the command of the forces with which he was empowered to prosecute the Mithridatic war, and resolved to oppose the authors of a demand which he considered arbitrary and improper. He advanced towards Rome, and Marius was obliged to save his life by flight. He escaped to Campania, but was discovered by the emissaries of Sylla, and dragged to the neighbouring town of Minturnæ, where the magistrates passed sentence of death on their magnanimous prisoner. The inhabitants of Minturnæ, however, fearful of putting so great a man to death, released him from prison, and favoured his escape to Africa, where he joined his son Marius, who had been exciting the princes of the country in his cause. He then set sail to assist his friend Cinna, who had favoured his interest at Rome, at the head of only 1,000 men; but his army gradually increased, and he entered the city like a conqueror. His enemies were inhumanly sacrificed to his fury; Rome was filled with blood, and he who had been once called the father of his country, marched through the streets attended by a number of assassins, who immediately slaughtered all those whose salutations were not answered by their leader. When he had sufficiently gratified his resentment, he again made himself consul; but he did not long enjoy this dignity: he was worn out with age and infirmities, and he died sixteen days afterwards, aged 70. Pompeius, Cneus, surnamed the Great, from his wonderful exploits, was son of Pompeius Strabo and Lucilla. He early distinguished himself in the field of battle; and, by pleading at the bar, he displayed his eloquence, and received the most unbounded

applause. Pompey followed the interest of Sylla; and, in his 26th year, he conquered Sicily, which was then in the power of Marius, and regained all the territories of Africa, which had revolted from Sylla. After the death of Sylla, Pompey was made consul; and, by the influence of his friends at Rome, he was empowered to finish the war against Mithridates, king of Pontus, and Tigranes, king of Armenia. He totally defeated the army of the king of Pontus, and that monarch with difficulty escaped; he next entered Armenia, and received the submission of King Tigranes; and, after he had conquered the Albanians and Iberians, visited countries which were scarcely known to the Romans, and, like a master of the world, disposed of kingdoms and provinces, receiving the homage of twelve crowned heads. He entered Syria, and pushed his conquests as far as the Red Sea. Part of Arabia was subdued, Judæa became a Roman province, and, when he had nothing to fear from Mithridates, who had destroyed himself, Pompey returned to Italy with all the pomp and majesty of an eastern conqueror. To strengthen himself still further, Pompey united with Cæsar and Crassus, and formed the first triumvirate; and the provinces of the republic were arbitrarily divided between the triumvirs. But this powerful confederacy was soon broken by the death of Julia, daughter of Cæsar, whom Pompey had married; and the total defeat of Crassus in Syria. While the conqueror of Mithridates was considered as a sovereign at Rome, the adherents of Cæsar were not silent; they demanded that either the consulship should be given to him, or that he should be continued in the government of Gaul, of which he had been deprived. This demand was refused, and a civil war was the consequence. Cæsar collected his forces, and crossed the Rubicon; and, in sixty days, all Italy acknowledged his power. Several famous battles were fought between these great men, with alternate success; at length the two armies met and engaged on the plains of Pharsalia, where Pompey was obliged to give way, overwhelmed with grief and shame. He disguised himself, and fled to the sea-coast, whence he passed into Egypt, and claimed protection from Ptolemy, who basely betrayed him. A boat was sent to fetch him on shore, and, after an affectionate parting with his wife Cornelia, Pompey disembarked, and was assassinated by Achilles and Septimius. His head was cut off, and sent to Cæsar, who turned away from it with horror, and shed a flood of tears. The body remained for some time naked on the sea-shore, till Philip, one of his freedmen, raised a burning pile, and deposited his ashes under a mound of earth. The two sons of Pompey the Great, Cneius and Sextus, after the death of their father, prepared to oppose the conqueror; but Cæsar met them with vigour and success; and at the battle of Munda they were defeated, and Cneius left among the slain. Sextus fled to Sicily, and was shortly afterwards murdered by order of Mark Antony.

generals, when that monarch invaded Asia. After the conqueror's death, in the general division of the Macedonian empire, Ptolemy obtained as his share the government of Egypt, with Lybia, and part of the neighbouring territories of Arabia. He added greatly to his Egyptian dominions, and enriched the city of Alexandria with the spoils of the different nations he had conquered.

—The second Ptolemy was the son of the preceding, and called Philadelphus. He showed himself worthy in every respect to succeed his great father; and could boast of reigning over 33,339 well-peopled cities. His army consisted of 200,000 foot and 40,000 horse, besides 300 elephants and 2000 armed chariots. He gave every encouragement to commerce; and, by keeping two powerful fleets, one in the Mediterranean, the other in the Red Sea, made Egypt the mart of the world. This monarch was accounted the richest prince of his age; and, at his death, he left in his treasury a sum equivalent to two hundred millions sterling.—The third, surnamed Evergetes, succeeded his father Philadelphus on the Egyptian throne, and distinguished himself by his clemency, moderation, and prudence.—Ptolemy the Fourth was surnamed Philopater; and began his reign with acts of the greatest cruelty, sacrificing successively to his avarice his mother, wife, sister, and brother. He made war against the Jews, and ordered an immense number of that nation to be exposed on a plain, and trodden to death under the feet of elephants. After a dissipated reign of 17 years, he died, and his death was immediately followed by the murder of the companions of his voluptuousness and extravagance, whose bodies were dragged with ignominy through the streets of Alexandria.—The fifth succeeded his father Philopater when at the age of only four years, and was, during his minority, under the protection of Aristomenes. At 14, he was crowned at Alexandria, and received the surname of Epiphanes, or Illustrious. Young Ptolemy was no sooner delivered from the shackles of a superior, than he betrayed the same vices which had characterized his father; the counsels of Aristomenes were despised, and that minister, who for ten years had governed the kingdom with equity and moderation, was sacrificed to the caprice of the sovereign. His cruelties raised seditions among his subjects, and he was at length poisoned by his ministers, after a reign of 24 years.—The sixth was son of the preceding, and called Philometor, on account of the hatred he bore his mother Cleopatra. During part of his reign, he shared his throne equally with his younger brother, Ptolemy Physcon, and they united to expel their common enemy, Antiochus, king of Syria, who had entered Egypt with a large army. No sooner were they delivered from the impending war by the Romans, who had checked the progress of Antiochus, and obliged him to retire, than Philometor and Physcon began with mutual jealousy to oppose each other's views. Physcon was banished by the superior power of his brother, and repaired to Rome, where he claimed the assistance of the senate, who settled the dispute between the two royal brothers, by making them independent of each other, and

giving the government of Lybia and Cyrene to Physcon, and confirming Philometor in the possession of Egypt and the Island of Cyprus. These terms of accommodation were gladly accepted; but Physcon soon afterwards claimed the dominion of Cyprus, which Philometor refusing to deliver up, an open rupture ensued between the brothers. The death of Philometor, however, left Physcon master of Egypt, and of all the dependent provinces; although the wife and son of the deceased monarch laid claim to the crown. Ptolemy Physcon was stigmatized with the appellation of Rakergetes, or Evil-Doer; a surname which he merited for his tyranny and oppression. A series of barbarities rendered him odious; and he died at Alexandria, after a reign of 29 years, hated and despised by his subjects.—

Ptolemy the Eighth, called Lathyrus, succeeded his father Physcon on the throne of Egypt; whence he was expelled to Cyprus by his mother Cleopatra, who placed the crown on the head of his brother, Ptolemy Alexander, her favourite son. Lathyrus became king of Cyprus, appeared at the head of a large army, and marched against the king of Judea, through whose assistance and intrigue he had been banished from Egypt by his mother. He conquered the Jewish monarch, leaving 50,000 of his men dead on the field; and, after many vain attempts to recover the kingdom of Egypt, retired to Cyprus, until the death of his brother Alexander restored him to his native dominions. Some of the cities of Egypt refused to acknowledge him as their sovereign; Thebes, in particular, for its obstinacy, was closely besieged for three successive years, and, from a powerful and populous city, was reduced to a heap of ruins. Lathyrus was succeeded by his only daughter, Cleopatra, whom Alexander, son of Ptolemy Alexander the First, soon afterwards married and murdered.—

The ninth of the Ptolemean kings of Egypt was named Ptolemy Alexander the First, brother of Lathyrus. He reigned conjointly with his mother Cleopatra, who expelled and soon afterwards recalled him; but Alexander, to prevent a second expulsion, put her to death, and for this unnatural act was himself murdered by one of his subjects.—Ptolemy, Alexander the Second, son of the preceding, succeeded. He was educated in the Island of Cos, and, falling into the hands of Mithridates, king of Pontus, escaped to Sylla, who restored him to his kingdom; but was slain by his subjects a few days after his restoration.—His brother, Ptolemy Alexander the Third, next ascended the throne: after a peaceful reign, he was banished by his subjects, and died at Tyre, leaving his kingdom to the Romans.—The twelfth was an illegitimate son of Ptolemy Lathyrus, and was surnamed Auletes, from his skill in playing on the flute. As his predecessor, by his will, had left the kingdom of Egypt to the Romans, Auletes knew that he could not be firmly established without the consent of the senate. He accordingly applied to Cæsar, who was then consul, and, on the payment of an immense sum of money, his succession was acknowledged. But these measures rendering him unpopular at Rome, he was obliged to fly his kingdom, and seek protection among his allies. After a long ab-

sence from Alexandria, during which period his daughter Berenice had made herself absolute, Auletes was replaced on his throne by the Romans, and died four years after his restoration. He left two sons and two daughters, and directed by his will his eldest son to marry the eldest sister, Cleopatra, and ascend with her the vacant throne. As these children were very young, the dying monarch recommended them to the care and protection of the Romans, and Pompey the Great was appointed their patron and guardian. The young king, who was called Dionysius or Bacchus, was in his 13th year, when his protector, after the fatal battle of Pharsalia, came to the shores of Egypt, and claimed his assistance. [See *Pompey the Great*.] When Cæsar arrived at Alexandria, he sat as judge to hear the various claims of the younger brother and sister to the throne; and, to satisfy the people, ordered the will of Auletes to be read, confirmed Ptolemy and Cleopatra in the possession of Egypt, and appointed the infant princes masters of the Island of Cyprus. But Ptolemy, who was governed by cruel and avaricious ministers, refused to acknowledge Cæsar as a judge or mediator; the Roman enforced his authority by arms, and three victories were obtained over the Egyptian forces. In attempting to save his life by flight, Ptolemy was drowned in the Nile; and Cleopatra became sole mistress of Egypt; but, as the Egyptians were averse to female government, Cæsar obliged her to marry her younger brother, then in his 14th year. This reign was the last of the Egyptian monarchs of the family of Lagus; and, at the death of Cleopatra, who was queen for 24 years, Egypt became a Roman province.

Punicum Bellum, the ancient name of the celebrated wars undertaken by the Romans against Carthage; in which Annibal and the two Scipios greatly distinguished themselves. The first Punic war was concluded in favour of the Romans, who bound the Carthaginians by a very submissive treaty, the conditions of which were for some time faithfully performed; but, when Annibal succeeded to the command of the Carthaginian armies in Spain, he spurned the boundaries which the jealousy of Rome had set to his arms, and war was determined on by the influence of Annibal in the Carthaginian senate. Without delay, he marched a numerous army towards Italy, and resolved to carry on the war to the very gates of Rome. He crossed the Rhone, the Alps, and the Apennines, with uncommon celerity, and the Roman consuls who were stationed to stop his progress were severally defeated. The battles of Trebia, Ticinus, and of the Lake of Trasymenus, but more particularly the decisive action at Cannæ, in which 45,000 men were slain, caused so much consternation at Rome, that, if Annibal had marched from the plains of Cannæ to the city, he would have met with no opposition, but have terminated a war with glory to himself, and inestimable advantages to his country. The victory of

Cannæ left the conqueror master of two camps, and of an immense booty; and the cities which had hitherto observed a neutrality eagerly embraced the interest of Carthage. In order to establish himself more firmly in Italy, Annibal called his brother Asdrubal from Spain, with a large reinforcement; but this army was intercepted and defeated by the Romans, and Asdrubal slain. Affairs now began to take a different turn, and the Carthaginians to experience a bitter reverse of fortune. The conquests of young Scipio, surnamed Africanus, in Spain, had raised the expectations of his countrymen; and, when recalled to Rome, he proposed to remove Annibal from the capital of Italy, by carrying the war into the heart of Carthage. This was a bold and hazardous enterprise; and, though opposed by the dictator Fabius, was at length approved by the senate, who empowered Scipio to sail to Africa. The successes of the young Roman were as rapid here as in Spain; and the Carthaginians, apprehensive for the fate of their capital, recalled Annibal from Italy. He received their orders with indignation, and, with tears in his eyes, departed from a country, where, for sixteen years, he had known no superior in the field of battle. On his arrival in Africa, the Carthaginian general soon collected a large army, and met his exulting adversary in the plains of Zama. The battle was long and bloody; the Romans ultimately obtained the victory; and Annibal, who had sworn eternal enmity to the gods of Rome, fled from Carthage, after advising his countrymen to accept the terms of the conqueror. The victory of Zama was decisive of the fate of Carthage, and concluded the second Punic war. During the 50 years which followed, the Carthaginians were employed in repairing their losses; but they still found in Rome a jealous rival and a haughty conqueror; they were also sorely oppressed and harassed by Masinissa, king of Numidia, the ally of Rome, who had made himself master of one of their provinces; and as, by one of the conditions of the treaty of Zama, the Carthaginians were unable to make war without the consent of Rome, they complained to the senate of this injustice, and sought its protection against the tyranny of Masinissa. But their petitions were received with indifference, and the king of Numidia continued his depredations. The Carthaginians, therefore, resolved to do themselves that justice which the Romans had denied them, and entered the field against Masinissa, by whom they were defeated with immense loss. By this desperate measure they had broken the treaty, and placed their destiny entirely at the disposal of the Romans; who, in order to prevent further hostilities, exacted from them conditions the most abject and submissive. The Carthaginians agreed to deliver up 300 hostages, all children of senators and of the most noble and respectable families; also, all their ships, their arms, engines of war, with all their naval and military stores. The Roman consuls next demanded, that they should leave their ancient habitations, and retire into the inland parts of Africa, and found another city, at the distance of not less than ten miles from the sea. This was heard with horror and indignation; the Romans were fixed and

Inexorable; and Carthage was filled with tears and lamentations. But the spirit of liberty was not entirely extinguished in the capital of Africa; and the Carthaginians resolved to sacrifice their lives for the protection of their gods, the tombs of their forefathers, and the place which had given them birth. They covered the ramparts with stones, to compensate for the weapons and instruments of war which they had given up to their enemies; the town was blocked up by the Romans, commanded by Scipio, surnamed Africanus the Younger, a descendant of the great Scipio, who finished the second Punic war, and a regular siege was begun. The operations of the Roman general, however, soon baffled the extraordinary efforts and determined resistance of the besieged; the communications they had with the land were cut off, and the city, which was twenty miles in circumference, was completely surrounded by the enemy. Despair and famine at length raged in the interior; Scipio gained access to the walls, but his entrance into the streets was disputed with uncommon fury; the houses as he advanced were set on fire to stop his progress, and such of the inhabitants as disdained to be made prisoners, perished in the flames, which gradually consumed their habitations. During seventeen days Carthage continued burning; and that city, which had once been the seat of commerce, the model of magnificence, the common store of the wealth of nations, and one of the most powerful states of the world, left behind no traces of its splendour, of its power, or even of its existence. This memorable event happened 147 years B. C.

Hercules once fell asleep in the deserts of Africa, after he had conquered Antæus; and was suddenly awakened by an attack of an army of these Lilliputians, who discharged their arrows with great fury upon his arms and legs. Pythagoras, a celebrated philosopher, born at Samos. He was early made acquainted with poetry and music; eloquence and astronomy became his private studies; and, in gymnastic exercises, he often bore the palm for strength and dexterity. About the age of twenty, he visited Egypt and Chaldea; and, after he had spent many years in gathering all the information which could be collected from antique tradition, concerning the nature of the gods, and the immortality of the soul, Pythagoras revisited his native island. But the tyranny of Polycrates disgusted the philosopher; and, though he was the favourite of the monarch, he retired from Samos, and a second time assisted at the Olympic games. From Olympia, he repaired to Elis and Sparta, and also to Magna Græcia, where he fixed his habitation, in the town of Crotona, about the 40th year of his age. Here he founded a sect which received the name of the Italian, and soon saw himself surrounded by a great number of pupils, which the recommendation of his mental as well as personal accomplishments had procured. The animated harangues of the Samian sage were attended with rapid success, and a reformation soon took place in the morals and lives of the people of Crotona. The females were exhorted to become modest; the youths were called from the pursuit of pleasure and intemperance; and the aged were directed no longer to waste their time in amassing riches, but to seek that peace and comfort of mind which frugality, benevolence, and philanthropy alone can produce. When they were capable of receiving his secret instructions, Pythagoras taught his pupils the use of ciphers and hieroglyphic writings; so that they could correspond together, though in the most distant regions, in unknown characters. The great influence which the philosopher possessed in his school

was transferred to the world; and, in a short time, the rulers and legislators of the principal towns of Greece, Sicily, and Italy, boasted of being the disciples of Pythagoras. The Samian philosopher was the first who supported the doctrine of metempsychosis, or transmigration of the soul into different bodies. In his theological system, he maintained that the universe was created from a shapeless heap of passive matter by the hands of a powerful Being, himself the mover and soul of the world, and of whose substance the souls of mankind were a portion. He considered numbers as the principles of every thing, and perceived in the universe regularity, correspondence, beauty, proportion, and harmony, as intentionally produced by the Creator. Pythagoras also distinguished himself by his discoveries in geometry, astronomy, and mathematics; and it is to him that the world is indebted for the demonstration of the 47th proposition of the first book of Euclid's elements, concerning the square of the hypothenuse. His system of the universe, in which he placed the sun in the centre, and all the planets moving in elliptical orbits around it, was deemed chimerical and improbable, until the deep inquiries of the 16th century proved it, by the most accurate calculations, to be true and incontestible. The time and place of the death of this great man are unknown; yet many authors suppose that he died at Metapontum, about 497 years before Christ; and so highly was his memory venerated by the people of Magna Græcia, that he received the same honours as were paid to the immortal gods. There is now extant a poetical composition, ascribed to him, entitled, *The Golden Verses of Pythagoras*.

Róma (Rome), a city of Italy, the capital of the Roman empire, situate on the banks of the river Tiber, about sixteen miles from the sea. According to Varró, the foundation of this celebrated city was laid by Romulus in the year 3961 of the Julian period, 3251 years after the creation of the world, 753 before the birth of Christ, and 431 after the Trojan war, and in the fourth year of the sixth Olympiad. In its original state, Rome was but a small castle on the summit of Mount Palatine; and its founder, to give his followers the appearance of a nation or a barbarous horde, erected a standard as a common asylum for criminals who fled from their native country, to avoid the consequent punishment. From such an assemblage a numerous body was soon collected; and, before the death of the founder, the Romans had covered with their habitations the Palatine, Capitoline, Aventine, and Esquiline hills, with Mounts Caelius and Quirinalis. Their dwellings were destitute of every ornament; they were made with unequal boards, and covered with mud, and served rather as a shelter against the inclemency of the seasons, than for relaxation or ease. Till the age of Pyrrhus, they despised riches; and many salutary laws were enacted to restrain luxury and punish indolence. The national spirit of the Romans was supported by policy: the triumphal procession of a conqueror along the streets, amidst the applause of thousands, was well calculated to promote emulation; and the number of gladiators which were introduced in the public games and spectacles, served to cherish their fondness of war, while it steeled their

hearts against the calls of compassion. In their worship and sacrifices the Romans were very superstitious; the will of the gods was consulted on every occasion, and no general marched to an expedition without the previous assurance from the augurs, that the omens were propitious. Their wars were declared in the most solemn manner, and prayers were offered in the temples for the prosperity of Rome, whenever a defeat had been sustained, or a victory won. Their sanctuaries were numerous; and there were no less than 429 temples, crowded with statues. During 244 years the Romans were governed by kings, who reigned as follows: Romulus, Numa, Tullus Hostilius, Ancus Martius, Tarquin Priscus, Servius Tullius, and Tarquin the Proud. But the tyranny and oppression of the last of these monarchs became so atrocious, that a revolution was effected in the state, and the democratical government established. After the expulsion of the Tarquins, the Romans became more sensible of their consequence, and turned their arms against those states which refused to acknowledge their superiority, or yield their independence. The wars with Pyrrhus and the Tarentines displayed their character in a different view: if they before had fought for freedom, they now drew the sword for glory, and the Roman name became known in Greece, Sicily, Spain, Africa, and, indeed, in all parts of the known world. After they had been governed by a race of princes, remarkable for the variety of their characters, the Roman possessions were divided into two distinct empires, by the enterprising Constantine; Constantinople became the seat of the eastern empire, and Rome remained in the possession of the western emperors, and continued to be the capital of their dominions. In the year 800, Rome, with Italy, was delivered by Charlemagne, the then emperor of the west, into the hands of the Pope, who still continues to hold the sovereignty, and to maintain his independence, under the name of the Ecclesiastical State, or States of the Church.

Romulus, son of Mars and Rhea Sylvia, born at the same birth with Remus. They were thrown into the Tiber by order of Amulius, who usurped the crown of his brother Numitor, king of Alba; but they were preserved by Faustulus, one of the king's shepherds, whose wife, Lupa, brought them up as her own. When the twins knew their real origin, they put Amulius to death, and restored the crown to Numitor. They then undertook to build a city, and had recourse to omens, and the flight of birds, to determine which of them should have the management of it. Remus first saw a flight of six vultures, and, soon afterwards, Romulus saw twelve; and he therefore began to lay the foundations of the city by marking with a furrow the place where he wished to erect the walls; but their slenderness was ridiculed by Remus, who leaped over them with great ease. This irritated Romulus, and his brother was immediately put to death, either by the hand of the former, or by one of his workmen. Romulus afterwards finished the walls of Rome, and peopled the country with foreigners and fugitives, whom he received as his lawful subjects. The Sabines, also,

left their original possessions, and came and dwelt in Rome, where Tatius, their king, shared the sovereign power with Romulus; and, by admitting the conquered nations among their citizens, the Romans soon rendered themselves most powerful and formidable opponents. After death, Romulus was ranked among the twelve great gods by the Romans, as being the founder of their city and empire, and son of the god of war.

Scipio, the name of a celebrated family at Rome, who obtained the highest honours in the republic. The most illustrious were—1. Cneus Scipio, surnamed *Asina*; he was father of Publius and Cneus Scipio. Publius, in the beginning of the second Punic war, was sent with an army to Spain to oppose Annibal, by whom he was conquered near the Ticinus, and would have lost his life, had not his son, who was afterwards called Africanus, courageously defended him. He again passed into Spain, and gained some memorable victories over the Carthaginians. His brother Cneus shared the supreme command with him; but their confidence proved their ruin. They separated their armies; and, soon afterwards, Publius was furiously attacked by the two Asdrubals and Mago, who commanded the Carthaginian forces. The Romans were cut to pieces, and their commander left dead on the field. Flushed with this success, the Carthaginians immediately marched against Cneus, whom the revolt of 30,000 Celtiberians had weakened and alarmed. The general, who was already apprised of his brother's death, secured an eminence, where he was soon surrounded on all sides. After desperate acts of valour, he was also defeated, and left among the slain.—2. Publius Cornelius, surnamed *Africanus*, was son of Publius Scipio, who was killed in Spain. He first distinguished himself at the battle of Ticinus, where he saved his father's life by deeds of unexampled valour and boldness. In his 21st year, he was made an edile; an honourable office, and never given but to such as had reached their 27th year. Some time afterwards, the Romans were alarmed by the intelligence that the commanders of their forces in Spain, Publius and Cneus Scipio, had been slaughtered; and young Scipio was immediately appointed to avenge the death of his father and uncle, and to vindicate the military honour of the republic. Cornelius soon proved how well qualified he was to be at the head of an army: the various nations of Spain were conquered; in four years, the Carthaginians were banished from that part of the continent, and the whole province became tributary to Rome. After these signal victories, Scipio was recalled to Rome, which still trembled at the continual alarms of Annibal, who was then at her gates. [See *Punicum Bellum*.] The battle of Zama was

decisive of the fate of Carthage; and the conqueror returned to Rome, where he was received with most unbounded applause, honoured with a triumph, and dignified with the appellation of Africanus. He afterwards, in the capacity of lieutenant, accompanied his brother against Antiochus, king of Syria. In this expedition his arms were attended with his usual success, and the Asiatic monarch submitted to the conditions of the conquerors. At his return to Rome, Cato, his inveterate rival, raised seditions against him; and the Petilli, two tribunes of the people, accused him of extortion in the provinces of Asia, and of living in an indolent and luxurious manner. Scipio condescended to answer his calumniators: the first day was occupied in hearing the different charges; but, when he again appeared on the second day, he interrupted his judges, and exclaimed, "Tribunes and fellow-citizens, on this day, this very day, did I conquer Annibal and the Carthaginians. Come, therefore, with me, Romans; let us go to the capitol, and there return our thanks to the immortal gods for the victories which have attended our arms." These words had an electric effect: the tribes and all the assembly followed Scipio, the court was deserted, and the tribunes were left alone in the seat of judgment. Yet, when this memorable day was forgotten, Africanus was a third time summoned to appear; but he had fled from the impending storm, to his country house at Linternia. Some time afterwards, Scipio died, in his 45th year; and so great an aversion did he express, as he expired, for the depravity of his countrymen, and the ingratitude of their senators, that he desired his bones might not be conveyed to Rome. They were accordingly inhumated at Linternia; and his wife, *Emilia*, raised a mausoleum, and placed upon it his statue.—

3. *Lucius Cornelius Scipio* was brother to Africanus, and accompanied him in his expeditions to Spain and Africa. He was rewarded with the consulship for his services to the state, and, after the defeat of Antiochus, king of Syria, surnamed *Asiaticus*. After the death of Africanus, Cato and the two Petilli, his devoted favourites, and the inveterate enemies of the family of the Scipios, turned their fury against Asiaticus, whom they charged with having received 6000 pounds weight of gold, and 480 of silver, from the monarch against whom, in the name of the Roman people, they were enjoined to make war. Scipio was condemned, and ordered to pay an immense fine, as were also his two lieutenants and his quaestor, who were included in the charge. Some time afterwards, he was appointed to settle the disputes between Lumenus and Sclencus; and, at his return, the Romans, ashamed of their severity towards him, rewarded his merit with such uncommon liberality, that Asiaticus was enabled to celebrate games in honour of his victory over Antiochus, for ten successive days, at his own expense.—4. *Nasica Scipia* was son of Cneus Scipio, and cousin to Scipio Africanus. He obtained the consulship after the death of his cousin; in which honourable office he conquered the Boii, and gained a triumph. He was also successful in an expedition which he undertook to Spain. Nasica also distinguished himself by the active

part he took in confuting the accusations against the two Scipios, Africanus and Asiaticus.—5. *Pulvius Æmilianus*, son of Paulus, the conqueror of Persus, was adopted by the son of Scipio Africanus. He received the same surname as his grandfather, and was called Africanus the Younger, on account of his victories over Carthage. Æmilianus first appeared in the Roman armies under his father, and afterwards distinguished himself as a legionary tribune in the Spanish provinces. He passed into Africa to demand a reinforcement from King Masinissa, the ally of Rome; and was a spectator of the long and bloody battle fought between that monarch and the Carthaginians, and which produced the third Punic war. Shortly afterwards, Æmilianus was made edile, and next appointed consul, though under the age required for that important office. The surname he had received from his grandfather he was doomed lawfully to claim as his own. He was empowered to finish the war with Carthage, the siege of which city had already begun; but the operations of the Romans were not continued with vigour. [See *Punicum Bellum*.] Though Scipio was obliged to demolish its very walls, to obey the orders of the Romans, yet he wept bitterly over the melancholy and tragical scene. The return of Æmilianus to Rome was as that of another conqueror of Annibal, and, like him, he was honoured with a magnificent triumph. Shortly afterwards, Scipio was appointed to finish the war which the Romans had hitherto carried on without success against Numantia; the fall of which was more noble than that of the capital of Africa, and the conqueror of Carthage obtained the victory only when his enemies had been consumed by famine or self-destruction. From his conquests in Spain, Æmilianus was honoured with a second triumph, and received the name of Numantinus. Yet his popularity was of short duration; for, by telling the people that the murder of Gracchus, his brother-in-law, was lawful, since he was turbulent, and inimical to the peace of the republic, Scipio incurred the displeasure of the tribunes, and was received by them with great disapprobation. His authority for a moment quieted their sedition, when he reproached them for their cowardice; and he exclaimed, "Faction wretches! do you think that your clamours can intimidate me? Me, whom the fury of your enemies never daunted! Is this the gratitude that you owe to my father Paulus, who conquered Macedonia! and to me! Without my family, you were slaves. Is this the respect you owe to your deliverers! Is this your affection?" This firmness silenced the murmurs of the assembly, but proved fatal to Scipio; who retired to Caieta, where, with his friend Lælius, he passed the rest of his time in innocent pleasure and amusement. But this he was not long permitted to enjoy; his secret enemies thirsted for his blood, and he was one morning found dead in his bed, with violent marks on his neck, as if he had been strangled. This assassination caused the utmost consternation throughout Rome; and it was then generally believed to have been committed by the triumvirs, Papirius Carbo, C. Gracchus, and Fulvius Flaccus, and by his wife Senpronilla, who was charged with having introduced the murderers into his

room. No inquiries, however, were made after the authors of his death; and the only atonement which the populace made was to attend his funeral, and show their concern by loud cries and lamentations.

They still continue to bear her name, and, as well as the whirlpool of Charybdis on the coast of Sicily, have always been considered fatal to navigators.

Seleucidæ, a name given to those monarchs of the Seleucian family who sat on the throne of Syria. The era of the Seleucidæ begins with the taking of Babylon by Seleucus, and ends at the conquest of Syria by Pompey.

Seleucus, the first of the Seleucidæ, surnamed Nicator, or Victorious, one of the captains of Alexander the Great, was son of Antiochus, king of Syria and Asia. After the king's death, he received Babylon as his province; but his ambitious views rendered him unpopular, and he was obliged to fly for safety to the court of his friend Ptolemy, king of Egypt. He afterwards recovered Babylon, which Antigonus had seized in his absence, and increased his dominions by the

conquest of Media, and some of the neighbouring provinces. Seleucus next made war against Antigonus, with the united forces of Ptolemy, Cassander, and Lysimachus; this monarch was defeated and slain, and his territories divided among the conquerors. When Seleucus became master of Syria, he built a city there, which he called Antioch, in honour of his father, and made it the capital of his dominions. He was preparing to set out to conquer Macedonia, when he was murdered by one of his servants, named Ptolemy Ceranus, a man on whom he had bestowed great favours, and whom he had distinguished by acts of unbounded confidence. Seleucus was succeeded by Antiochus Soter.—The second, called Callinicus, ascended the throne after his father, Antiochus Theus. He attempted to make war against Ptolemy, king of Egypt; but his fleet was shipwrecked in a violent storm, and his armies conquered by the enemy. Seleucus was taken prisoner by Arsaces, an officer who had made himself powerful by the dissensions in the family of the Seleucidae; and, after he had been detained for some time in Parthia, he died of a fall from his horse.—The third succeeded his father, Seleucus the Second, and received the name of Ceranus, from being a weak, timid, and irresolute monarch. He was murdered by two of his officers, after a reign of three years, and his brother Antiochus ascended the throne, and rendered himself so celebrated that he acquired the name of Great.—The fourth of the Seleucidae was the son of Antiochus the Great, and surnamed Philopater. His empire had been weakened by the Romans when he became monarch, and the yearly tribute of a thousand talents to those victorious enemies lessened his power and consequence among nations. Seleucus was poisoned after reigning twelve years.—The fifth succeeded his father, Demetrius Nicator, on the throne of Syria. He was murdered in the first year of his reign by his mother Cleopatra, who also sacrificed her husband to her ambition.—The sixth was son of Antiochus Gryphus: he was banished from his kingdom by Antiochus Pius, and fled to Cilicia, where he was consumed in a palace which the inhabitants had set fire to.

Semiramis, a celebrated queen of Assyria, daughter of the goddess Derecto. She was exposed in a desert, but her life was preserved by doves for a whole year, until found by one of the shepherds of Ninus, who brought her up as his own child. When grown up, Semiramis married Menones, governor of Nineveh; who hung himself when Ninus, king of Assyria, demanded her as his wife. Semiramis had a son by Ninus, called Ninias, of whom she was passionately fond. To establish herself firmly on the throne, she

killed Ninus, and caused herself to be proclaimed queen and sole empress of Assyria. Semiramis then began to repair the capital of her empire; and, by her means, Babylon became the most superb and magnificent city of the world. She visited every part of her dominions, and left every where immortal monuments of her greatness and benevolence. But her unconquerable and unnatural passion for her son Ninias induced him to destroy her with his own hands, and she was changed into a dove.

Supplicia, a Roman matron, sister of the Gracchi; who was accused of having assisted to murder her husband, Scipio the Younger.

Seneca, *M. Annaeus*, a native of Corduba, in Spain, and father of Seneca, the philosopher. He made a collection of declamations from the most celebrated orators of the age, and from that circumstance received the appellation of Declamator. His son, *L. Annaeus Seneca*, early distinguished himself by his extraordinary abilities. He was taught eloquence by his father, and received lessons in philosophy from the best and most celebrated stoics of the age. In the character of a pleader, Seneca appeared to great advantage; but the fear of Caligula, who aspired to the name of an eloquent speaker, deterred him from pursuing his favourite study, and he sought a safer employment in canvassing for the honours and offices of the state. He was made quaestor; but the aspersions which were thrown upon him on account of a shameful amour with Julia Livilla, the sister of Caligula, removed him from Rome, and he was banished by the emperor to Corsica. After he had remained five years in Corsica, he was recalled by the empress Agrippina, to take charge of the education of her son Nero, who was destined to succeed to the empire. In the honourable duty of preceptor, Seneca gained much credit; and, as long as Nero followed his advice, Rome enjoyed tranquillity. But Seneca was too well acquainted with the natural disposition of Nero to think himself secure: he had been accused of having amassed ample riches during the four years in which he had attended Nero as a preceptor, and also of having initiated his pupil in those unnatural vices and abominable indulgences which disgraced him as a monarch and a man; and he therefore desired his imperial pupil to accept of the riches and possessions which his attendance on his person had procured, and to permit him to retire to solitude and study. Nero refused with artful duplicity, and Seneca, to avoid further suspicions, kept himself at home, as if labouring under a disease. In the conspiracy of Piso, which happened some time afterwards, and in which some of the most noble of the Roman senators were concerned, Seneca's name was mentioned by Natalis; and Nero, glad of an opportunity of sacrificing him to his jealousy, ordered the philosopher to destroy himself. Seneca was at table with his wife Paulina and two friends, when the messenger from the tyrant arrived. He heard the words which commanded him to commit suicide

with philosophic firmness, and even with joy; and observed, that such a mandate might long have been expected from a man who had murdered his own mother, and assassinated all his friends. Seneca ordered his veins to be opened, but they bled so slowly, that he drank a dose of poison to accelerate his death. This had no effect; the soldiers became clamorous, and he was carried into a stove, and suffocated by the steam. His body was buried without pomp or ceremony, according to the will he had made when enjoying the unbounded favours of Nero. The compositions of Seneca are numerous, and chiefly on moral subjects. There are also some tragedies ascribed to him. He died at the age of 53. A.D. 65.

Ser'vius Tullius, the sixth king of Rome, son of Oerisia, a slave of Corniculum. Servius was brought up and educated in the palace of Tarquin, and raised himself to such consequence, that the monarch gave him his daughter, Tarquinia, in marriage. Servius soon endeared himself to the Romans as a warrior and a legislator; and, on the death of his father-in-law, he ascended the throne. He defeated the Veientes and Tuscani, and established the census; he increased the number of the tribes; he beautified and adorned the city, and enlarged its boundaries by taking within its walls the hills Quirinalis, Viminalis, and Esquilinus. He also built several temples to the goddess of fortune, to whom he deemed himself particularly indebted for obtaining the kingdom. Servius was murdered by his son-in-law; and his daughter Tullia ordered her chariot to be driven over the mangled body of her father. His death was universally lamented; and the slaves annually celebrated a festival in his honour, in the temple of Diana on Mount Aventine, which Servius had built. B.C. 534.

Se'verus, Lucius Septimius, a Roman emperor, born at Leptis, in Africa. After the murder of Pertinax, Severus resolved to remove Didius Julianus, who had bought the imperial purple; and therefore he proclaimed himself emperor on the borders of Ægyptum, where he was stationed against the barbarians. He took as his partner in the empire, Albinus, who was at the head of the Roman forces in Britain, and marched towards Rome. He was received with universal acclamations; Julianus was deserted by his favourites, and assassinated by his own soldiers. But while he was victorious at Rome, Severus did not forget that his competitor, Pescennius Niger, was in the

east, at the head of a powerful army. Many obstinate battles were fought between the troops of the imperial rivals, till, on the plains of Issus, Niger was totally ruined by the loss of 20,000 men. Severus afterwards pillaged Byzantium, and conquered several nations in the east; he then returned to Rome, and resolved to destroy his only remaining rival, Albinus, with whom he had hitherto reluctantly shared the imperial power. He attempted to assassinate him by his emissaries; but, when this had failed, Severus had recourse to arms, and the fate of the empire was again decided on the plains of Gaul. Albinus was defeated, and the conqueror was so elated, that he insulted the dead body of his rival, and ordered it to be thrown into the Rhone. After enjoying a short respite from the toils of war, Severus again marched into the east, with his two sons, Caracalla and Geta, and made himself master of Seleucia, Babylon, and Ctesiphon, and advanced without opposition into the Parthian territories. From Parthia he marched towards the more southern provinces of Asia; and, after he had visited the tomb of Pompey the Great, he entered Alexandria, to which city he granted a senate, and viewed with curiosity the monuments and ruins which that ancient kingdom contained. The revolt of Britain recalled Severus from the east; thither he directed his attention, reduced it under his power, and built a wall across the northern part of the island, to defend it against the frequent invasions of the Caledonians. Severus died at York, aged 66, exclaiming, that he had been every thing man could wish, but was then nothing.

Se'verus, Alexander, a native of Phœnicia, adopted by Helio-gabalus; at whose death he was proclaimed emperor, by the unanimous approval of the army and the congratulations of the senate. Shortly after he ascended the throne, the empire was disturbed by the incursions of the Persians; and Alexander marched into the east, and obtained a decisive victory over them. At his return to Rome, he was honoured with a triumph; but the revolt of the Germans called him away from the indolence of the capital. Severus was murdered in his tent, in the midst of his camp, after reigning 14 years. A.D. 235.

Sibyllæ, certain women inspired by heaven, who flourished in different parts of the world. They were ten in number; the most celebrated of whom was that of Cumæ, in Italy. Apollo became enamoured of her, and offered to give her whatever she should ask. The Sibyl demanded to live as many years as she had grains of sand in her hand, but forgot to ask for the enjoyment of the health, vigour, and bloom, of which she was then in possession. The god granted her request, but she refused to gratify the passion of her lover, though he promised her perpetual youth and beauty. She became old and de-

erepid, her form decayed, and melancholy paleness and haggard looks succeeded to bloom and cheerfulness. She had already lived about 700 years when Æneus went to Italy, and had three centuries more to exist before her years were as numerous as the grains of sand she had held in her hand. Another of these Sibyls went to the palace of Tarquin the Proud, and offered three books for sale, at a very high price. The monarch bought the books, and she instantly vanished, and never afterwards appeared to the world. They were preserved with great care by Tarquin, and called the Sibylline verses. A college of priests was appointed to keep them; and such reverence did the Romans entertain for them, that they were consulted with the greatest solemnity, and only when the state seemed to be in danger.

He was present in 121 battles, and obtained 14 civic crowns, 3 mural crowns, 6 crowns of gold, 83 golden collars, 60 bracelets, 18 lances, and 23 horses, with all their ornaments, as the reward of his uncommon services. He could show the scars of 45 wounds, all in the breast; the greater part of which he received in opposing the Sabines when they took the Capitol. The popularity of Sicinius became odious to Appius Claudius, and he was attacked and killed. Of 100 men who were ordered to fall upon him, he killed 15, and wounded 30. For this extraordinary courage, Sicinius was called the Roman Achilles.

Socrates, the most celebrated philosopher of antiquity, was a native of Athens. His father was a statuary, and his mother followed the profession of a midwife. For some time Socrates laboured with his father; but he was called away from this meaner employment by Crito, who admired his genius and courted his friendship. Philosophy soon became the study of Socrates; and, under Archelaus and Anaxagoras, he laid the foundation of that exemplary virtue, which succeeding ages have ever loved and venerated. He appeared with the rest of his countrymen in the field of battle; he fought with boldness and intrepidity; and to his courage two of his friends and disciples, Xenophon and Alcibiades, owed the preservation of their lives. But the character of Socrates appears more conspicuous as a philosopher and a moralist, than as that of a warrior. He was fond of labour, and inured himself to suffer hardships; he bore injuries with patience; and the insults of malice or resentment he not only treated with contempt, but even received with a mind that expressed some concern for the depravity of human nature. Socrates was attended by a number of illustrious pupils, whom he instructed by his exemplary life and doctrines. He spoke with freedom on every subject, religious as well as civil; and this independence of spirit, and visible superiority of mind, created him many enemies; but, as his character was irreproachable, and his doctrines pure, the voice of malevolence was silent. Yet Aristophanes undertook, at the instigation of Melitus, in his comedy of the Clouds, to ridicule the venerable character of Socrates on the stage; and, when once the way was open to calumny and defamation, the fickle populace paid no reverence to the philosopher whom they had before regarded as a being of a superior order. Melitus, together with Anitus and Lycon, stood forth to criminate him; and Socrates was

summoned before the tribunal of five hundred. He was accused of corrupting the Athenian youth, of making innovations in the religion of the Greeks, and of ridiculing the gods. In his defence he modestly said, that what little knowledge he possessed was applied to the service of the Athenians; it was his wish to make his fellow citizens happy, and it was a duty which he performed by the special command of the gods, "Whose authority," said he emphatically to his judges, "I regard more than yours." Such language from a man who was accused of a capital crime astonished and irritated the tribunal. Socrates was condemned; and when he was demanded, according to the Athenian laws, to pass sentence on himself, and mention the death he preferred, he said, "For my attempts to teach the Athenian youth justice and moderation, and render the rest of my countrymen more happy, let me be maintained at the public expense the remaining years of my life in the Prytaneum; an honour, O Athenians! which I deserve more than the victors of the Olympic games. They make their countrymen more happy in appearance, but I have made you so in reality." This exasperated the judges in the highest degree; and he was condemned to drink hemlock. Before he left the tribunal, he recommended to their care his defenceless children, and said, that to die was a pleasure, since he was going to hold converse with the greatest heroes of antiquity. The solemn celebration of the Delian festivals prevented his execution for thirty days, during which time he was confined in the prison, and loaded with irons. He disregarded the intercession of his friends; and, when it was in his power, he refused to escape from prison. When the hour to drink the poison arrived, the executioner presented him the cup with tears in his eyes. Socrates received it with composure, and, after he had made a libation to the gods, he drank it with an unaltered countenance, and in a few moments expired. In the 70th year of his age. He was scarcely buried, when the Athenians repented of their cruelty; his accusers were universally shunned and despised; one suffered death, some were banished, and others put an end to that life, which their severity to the best of their countrymen had rendered insupportable. B.C. 400.

Sol, the sun. — A name of Apollo.
Solon, one of the seven wise men of Greece, was born at Salamis, and educated at Athens. After he had devoted part of his time to philosophical and political studies, he travelled over the greatest part of Greece; and, at his return, found that dissensions were kindling among his countrymen, who fixed their eyes upon him as their deliverer, and he was elected archon and sovereign legislator. He made many salutary regulations in the state, and bound the Athenians by a solemn oath that they would faithfully observe his laws for the space of one hundred years. *Solon* then resigned the office of legislator, and travelled into Egypt. After ten years' absence, he returned to Athens; and had the mortification to find the greater part of his regulations disregarded by the factious spirit of his countrymen, and the usurpation of Pisistratus, his near relation. *Solon* therefore quitted Athens in disgust, and retired to

He was revengeful in the extreme, and sacrificed thousands of his fellow-countrymen to his caprice and passion; and, when one of the senators had the boldness to ask the tyrant when he meant to stop his cruelties, Sylla, with an air of unconcern, answered, that he had not yet determined; but that he would take it into his consideration. Tacitus wrote a treatise on the manners and customs of the Germans, which was admired for its fidelity and exactness. His life of C. In the time of peace, Tarquin repaired the walls of the capital, and adorned the public places with elegant buildings and useful ornaments. To him the Romans were also indebted for their aqueducts and subterraneous sewers, which supplied the city with fresh and wholesome water, and removed all the filth and odour which too often breed pestilence and disease. Tarquin was assassinated by the two sons of his predecessor, in his 80th year. B.C. 518.—The 2nd Tarquin, surnamed the Proud, was grandson of the preceding. He ascended the throne after his father-in-law, Servius Tullius, and was the seventh and last king of Rome. He married Tullia, the daughter of Tullius; at whose instigation he murdered his father-in-law, and seized the kingdom. The crown he had obtained by violence, he endeavoured to keep by a continuation of tyranny. The public treasury was soon exhausted by the continual extravagance of Tarquin; and, to silence the murmurs of his subjects, he called their attention to war. He was successful in his military operations; the neighbouring cities submitted; but, while the siege of Ardea was continued, the wantonness of his son Sextus, at Rome, for a while stopped the progress of his arms [see *Lucretia*]; and the Romans, whom a series of barbarities and oppression had hitherto provoked, no sooner saw the virtuous Lucretia stab herself, than the whole city and camp arose with indignation against the monarch. He at last retired to the island of Caprea, on the coast of Campania, where he buried himself in unlawful pleasures. Virgilius (*Virgil*), called the Prince of the Latin poets, was born at Aude, a village near Mantua, about 70 years before Christ. He repaired to Rome with his father, where he soon formed an acquaintance with Mecenas, and recommended himself to the favours of the emperor Augustus. Some time afterwards, Virgil wrote his *Georgics*; a poem the most perfect of all Latin compositions. The *Æneid* was begun at the particular request of Augustus; but the poet died before he had revised this immortal work, which had engaged his attention for eleven successive years; and he ordered, in his will, his unfinished poem to be burned. This injunction, however, was disobeyed; the poem was delivered by the emperor to three of his literary friends, who were directed to revise it, and expunge whatever they deemed improper, but they were strictly enjoined not to make any additions; hence the cause that so many lines of the *Æneid* are unfinished, particularly in the last books. The great merit of this work is well known; and it will ever remain undecided which of the two poets, Homer or Virgil, is more entitled to our praise and admiration. The writer of the *Iliad* stood as a pattern to the favourite of Augustus; the voyage of *Æneas* is copied from the *Odyssey*; and for his battles, Virgil found a model in the wars of Troy, and the animated descriptions of the *Iliad*. The Romans were not insensible to the merit of their poet: Virgil received great applause in the capital; and, when he entered the theatre, he was astonished and delighted to see the crowded audience rise up to him as to an emperor, and welcome him by reiterated plaudits. In the works of Virgil, there is a more perfect and satisfactory account of the religious ceremonies and cus-

oms of the Romans, than in all the other Latin poets, Ovid excepted. In his connexions, Virgil was remarkable; his friends enjoyed his unbounded confidence, and his library and possessions seemed to be the property of the public. Like other great men, he was not without his enemies and detractors; but from their aspersions he received additional lustre. The poet, in his latter years, attended his patron, the emperor, in the east, but was detained at Naples by ill health. He however, went to Athens, and met Augustus on his return; but he again fell sick, and ordered himself to be removed to Italy, where he died, in his 51st year.

His request being granted, he plunged a knife into the breast of Virginia, to preserve her from the lust and violence of a tyrant. Virginius then ran to the camp with the bloody knife in his hand; the soldiers were astonished and incensed against the decemvir who was the cause of Virginia's death, and immediately marched towards the capital. Appius was seized, but he destroyed himself in prison; Spurius Oppius, another decemvir, also killed himself; and Marcus Claudius, the favourite of Appius, was put to death, and the decemviral power abolished.

Vitellius Andrus, a Roman, descended from an illustrious family, and created emperor after Otho. He did not, however, long enjoy his exalted station; his continual gluttony, intemperance, and debauchery, disgusted his subjects, and they rose against him, tied his hands behind his back, and dragged him naked through the streets. After being for some time exposed to the reproaches and insults of the populace, he was carried to the place of execution, and put to death with repeated blows; his head was then cut off, and fixed on a pole, and his body thrown into the Tiber. Xenocrates, an ancient philosopher, born at Calchedonia, and educated in the school of Plato. He was remarkable as a disciplinarian, and required that his pupils should be acquainted with mathematics before they came under his care; and even rejected such as had not the necessary qualifications, saying, that they had not yet found the key of philosophy. His contempt of riches was very conspicuous; and, when Alexander, in order to gain his confidence, sent some of his officers with fifty talents, as a present to the philosopher, he said, "Tell your master to keep his money—he has more people to maintain than I have." His integrity was also so well known, that, when he appeared in a court as a witness, the judges dispensed with his oath. The character of Xenocrates was also distinguished in every other particular; and he has been held up as a pattern of virtue from the following circumstance: the courtesan Lais had pledged herself to forfeit an immense sum of money if she did not triumph over the virtue of Xenocrates. She tried every art, assumed the most captivating looks, and used the most tempting attitudes to gain the philosopher, but all to no purpose; and Lais declared that she had not lost her money, as she had pledged herself to conquer a human being, and not a lifeless stone. Xenocrates wrote above 60 treatises on different subjects, and acknowledged no other deities but heaven and the seven planets. It is said that he fell in the night with his head in a basin of water, and was suffocated, at the age of 82.

Xenophanes, a Greek philosopher of Colophon, disciple of Archelaus. Xenophanes, a Pythagorean philosopher, who lived till the age of 170, and enjoyed all his faculties to the last.

Xenophon, an Athenian, celebrated as a general, an historian, and a philosopher. In the school of Socrates he received those instructions and precepts which afterwards so eminently distinguished him. He joined the army of Cyrus the younger in an expedition against his brother Artaxerxes, king of Persia, and showed he was a true disciple of Socrates, and that he had been educated in the warlike city of Athens. After the decisive battle in the plains of Cunaxa, and the fall of Cyrus, the prudence and vigour of his mind were called into action. The 10,000 Greeks, who had followed the standard of an ambitious prince, were now at the distance of 600 leagues from their native home, in a country surrounded on every side by a victorious enemy, without money, without provisions, and without a leader. Xenophon was selected from among the officers to superintend the retreat of his countrymen; and, although he was opposed by malevolence and envy, he rose superior to every danger. Notwithstanding he was under continual alarms from the sudden attacks of the Per-

sians, he was still enabled to cross rapid rivers, penetrate through vast deserts, and gain the tops of mountains, where he rested secure for a while, and refreshed his fatigued companions. This celebrated retreat was at length happily effected; and the Greeks returned home, after a march of 1115 leagues, which was performed in 215 days; the whole particulars of which had now, perhaps, been forgotten, had not the great philosopher who planned it employed his pen in describing the dangers he had escaped, and the difficulties he had surmounted. Xenophon afterwards gained new honours, under Agesilaus, in Asia; but his fame did not escape the aspersions of jealousy, and he was banished from Athens for accompanying Cyrus against his brother. He retired to Scillus, a small town of the Lacedæmonians, and dedicated his time to literary pursuits, and to the composition of those works which gained him such renown in after ages. The sentiments of Xenophon as to religion and the divinity were the same as those of the venerable Socrates: he supported the immortality of the soul, and, with all the zeal and fervour of a Christian, he exhorted his friends to cultivate those virtues which alone insure the happiness of mankind. Xenophon died at the age of 90. B. C. 359.

Xerxes, the second son of Darius, succeeded his father on the throne of Persia. He continued the warlike preparations of his predecessor, and added the revolted kingdom of Egypt to his extensive possessions. Xerxes afterwards invaded Europe, and entered Greece with an army which, with the numerous retinue of servants, eunuchs, and women, that attended it, amounted to 5,283,220 souls. This multitude was stopped at Thermopylae by the intrepidity and valour of 300 Spartans, under King Leonidas. The Persian monarch, astonished that such a handful of men should dare to oppose his progress, ordered some of his soldiers to bring them alive into his presence; but, for three successive days, the most valiant of the Persian troops were repeatedly defeated in endeavouring to execute the monarch's injunctions. The heroic Spartans would have triumphed much longer, but for the treachery of a Trachinian, who led a detachment of Persians by a secret path up the mountains, whence they suddenly fell upon the rear of the Spartans, and cut them to pieces. The battle of Thermopylae was the commencement of the disasters which befell Xerxes: the more he advanced, the greater disappointments he experienced; his fleet was defeated at Artemisium and Salamis; and he found his millions unable to conquer a nation that was superior to his in the knowledge of war and maritime affairs. He therefore hastened back to Persia, and, in 59 days, marched over all that territory which he had before passed with such pomp and magnificence in the space of six months. When he arrived in his capital, Xerxes forgot his dangers, losses, and defeats, and gave himself up to riot and de-

bauchery. His indolence and luxurious voluptuousness at length caused great discontent among his subjects, and he was murdered in his bed by Artabanus, the captain of his guards, in the 21st year of his reign.

Zeno, a philosopher of Elia, or Vella, in Italy, and disciple of Parmenides. His opinions about the universe, the unity, incomprehensibility, and immutability of all things, were the same as those of Xenophanes, and the rest of the Eleatic sect.—There was also another famous philosopher of the name of Zeno, born in the Island of Cyprus, who was the founder of the sect called Stoics. The first part of his life was spent in commercial pursuits. As he was returning from Phœnicia, a storm drove his ship on the coast of Attica; and, to dissipate his melancholy, he entered a bookseller's shop, and began to read. The volume was written by Xenophon; and the merchant was so captivated by the eloquence and beauties of the philosopher, that, from that time, he renounced the pursuits of a busy life, and closely addressed himself to the study of philosophy. Zeno attended the schools of Crates, Stilpo, Xenocrates, and Polemon; and became perfect in every branch of knowledge. He opened an academy at Athens, and was soon surrounded by the great, the learned, and the powerful. His life was an example of soberness and moderation; his manners were austere; and to his temperance and regularity he was in

debted for the continual flow of health which he always enjoyed. After he had taught publicly for 48 years, Zeno died, aged 98. This name was common to many of the Roman emperors on the throne of Constantinople, during the fifth and sixth centuries.

Zenobia, a queen of Iberia, wife of Rhadamistus; who, being unable to accompany her husband when he was banished from his kingdom by the Armenians, on account of her pregnancy, entreated him to murder her. Rhadamistus hesitated for some time; but, fearful of her falling into the hands of the enemy, he slew her, and threw her body into the Araxes.—*Zenobia Septimia*, a celebrated princess of Palmyra, who married Odenatus, whom Gallienus acknowledged as his partner on the Roman throne. After the death of her husband, which she is said to have hastened, she caused herself to be styled queen of the east, and fortified herself against the attacks of Gallienus. When Aurelian succeeded the former, he marched into the east to punish the pride of Zenobia, who appeared at the head of 700,000 men. She bore the labours of the field like the meanest of her soldiers, and walked on foot, fearless of danger. Two battles were fought, and the courage of the queen gained the superiority; but she was at length overpowered, and fled to her capital, determined to support a siege. Aurelian followed her, and proposed terms of accommodation, which were rejected by the warlike princess. Her hopes of victory, however, vanished when she heard that the armies which were marching to her succor from Armenia and Persia had been partly defeated and bribed from her allegiance; and she fled from Palmyra in the night, but was pursued and caught as she was crossing the Euphrates. Zenobia was brought into the presence of Aurelian, and, although the soldiers were clamorous for her death, was treated with great humanity by the emperor, who gave her large possessions near Tibur, where she lived the rest of her days in peace, with all the grandeur and majesty which became a queen of the east and a warlike princess. Chance-Medley. The accidental killing of any one, not altogether without the fault of the offender, but without malice prepense.

Chancery. The highest court of judicature in this kingdom next to the Parliament, and of very ancient institution. The Court of Chancery is called a *Court of Equity*, because it was instituted for the purpose of

proceeding by the rules of equity and conscience, and of moderating the rigour of the common law, the *intention* being considered rather than the words of the law; equity being the correction of that wherein the law, by reason of its universality, is deficient.— Yet the Court of Chancery is not intended to act in *opposition* to, but in assistance of, the common law, supplying its deficiencies, not contradicting its rules; no judgment of law being reversible by a decree in Chancery. This court had its origin in the wish to render justice complete, by removing impediments to the fair decision of a question in other courts; by providing for the safety of property in dispute, pending a litigation; by restraining the assertion of doubtful rights, in a manner productive of irreparable damage; by preventing injury to a third person from the doubtful title of others; by putting a bound to vexatious and oppressive litigations, and preventing unnecessary multiplicity of suits; and by redressing all frauds and deceits for which there is no remedy at common law, &c. Thus it will appear, that the numerous evils complained of as emanating from this court are not, in fact, caused by the institution of the court itself, but by the vexatious delays arising therein, and the immense expense attendant on its forms and proceedings.

Clergy (the Privilegium Clericale, or Benefit of Clergy). [Although the privilege called "Benefit of Clergy," which formerly extended to certain persons, has been, by a recent act of Parliament, entirely abolished, it so often occurs in judicial and historical records, that we deem it necessary to give an account of it.] This had its origin in the pious regard paid by Christian princes to the church in its infant state; and consisted of certain *exemptions* which they granted to

the church in criminal matters: 1. exemption of *places*, consecrated to religious duties, from criminal arrests, which was the foundation of sanctuaries; 2. exemption of the *persons* of clergymen from criminal process before the secular judge, in a few particular cases, which was the true original meaning of the *privilegium clericale*. In the course of time, however, the *Benefit of Clergy* extended to every one that could read; for such was the ignorance of those times, that it was thought a great proof of learning to be able to read; and a man possessed of this *accomplishment* was accounted a clerk, or *clericus*, and allowed the benefit of clerkship, though never initiated into holy orders. But when, through the invention of printing, and other concurrent causes, learning began to be more generally disseminated than formerly, it was found that as many laymen as divines were admitted to the *privilegium clericale*, and reading was, therefore, no longer considered a competent proof of clerkship; though learned laymen were still allowed some privilege, being subjected to a slight degree of punishment only, though they could claim the benefit of clergy but once. Before it was wholly abolished, the "benefit of clergy" was frequently taken away, by statutes expressly made to meet certain offences.

This court holds plea of all civil causes at common law between subject and subject, in actions real, personal, and mixed: it does not possess any original jurisdiction; nor has it, like the King's Bench, any mode of proceeding in criminal cases peculiar to itself; but its authority is founded on original writs issuing, or presumed to have been issued, out of the Court of Chancery; which original writs are the king's mandates for the court to proceed in the determination of the causes mentioned therein.

This is a word of very great extent, comprehending whatever may be inherited, or come to the heir; viz. all such immovable things, whether corporeal or incorporeal, which a man may have, to him and his heirs, by way of inheritance; and which, if they are not otherwise devised, descend to him that is next heir, and fall not to the executor, as chattels do.

Heriot. The best beast, whether it be a horse, ox, or cow, that the tenant dies possessed of, due and payable to the lord of the manor; and, in some manors, the best goods, piece of plate, &c. A *heriot* originally signified a tribute given to the lord of a manor for his better preparation for war. Heriots are now to be considered as usually divided into two sorts,—*Heriot-Service* and *Heriot-Custom*: the former, being such as are due upon a special reservation in a grant or lease of lands, amount to little more than a mere rent; the latter arise upon no special reservation whatsoever, but depend merely upon immemorial usage and custom. *Heriot-Service* is payable on the death of a *tenant in fee-simple*; and *Heriot-Custom* upon the death of a *tenant for life*.

The first has no share of guilt at all, and is supposed to happen either through unavoidable necessity, or by permission of the law; the second very little, being purely accidental; but the third is the highest crime against the law of nature that a man is capable of committing, and includes three distinct offences; viz. 1. *self-murder*; 2. *mauslaughter*; and, 3. *murder*.

The law declares that a man is not an idiot if he has any glimmering of reason, so that he can tell his parents, his age, or such common matters; but a man who is born deaf, dumb, and blind, is looked upon by the law in the same light as an idiot.

Ignoramus. This word, signifying *we are ignorant*, was formerly written on a bill of indictment by the grand jury impanelled on the inquisition of criminal causes, when they rejected the evidence as too weak or defective to put a prisoner on his trial. The privilege of trial by jury is of great antiquity in this kingdom, and cannot be too highly prized. Juries are of three kinds: viz. *Grand Juries*, *Petty Juries*, and *Special Juries*. The *Grand Jury* consists of twenty-four substantial men, either gentlemen or superior yeomen, chosen indifferently by the sheriff throughout the county, to consider of all bills of indictment preferred to the court, which they either approve by writing *billā vera* upon them, or disallow by indorsing them *ignoramus*. The *Petty Jury* consists of twelve men, impaneled upon criminal and civil cases.—

FORMS OF EPISTOLARY ADDRESS.

TO THE ROYAL FAMILY.

KING AND QUEEN.

Superscription.—To the King's [Queen's] Most Excellent Majesty.

Commencement.—Sire [Madam]; Most Gracious Sovereign; May it please your Majesty.

Conclusion.—I remain, with the profoundest veneration, Sire, [I remain, Madam], your Majesty's most faithful Subject, and dutiful [most dutiful, most humble, and most devoted] Servant.

PRINCES OF THE BLOOD ROYAL.

The Princes and Princesses of the *Blood Royal*, are the King's Sons and Daughters, Brothers and Sisters, Uncles and Aunts;—Princes of the *Blood*, inereiy, are his Nephews and Cousins, who are styled *Highness* only; unless, as in the case of the late Duke of Gloucester, permitted by his Majesty to bear the title of *Royal*.

DUKE, PRINCESS.

Sup.—To His [Her] Royal Highness the Duke of Cambridge [Princess Augusta.]

Comm.—Sir, [Madam].

Con.—I remain, with the greatest respect, Sir [I have the honour to be, Madam], Your Royal Highness's most dutiful and most obedient [most obedient and devoted] Servant.

Sup.—To her Royal Highness the Duchess of Cambridge (as wife of a Prince of the *Blood Royal*).

Comm.—Madam.

Con.—I have the honour to be, Madam, Your Royal Highness's most obedient and very humble Servant.

The formal style of Dukes of the *Blood Royal* is *Most High, Most Mighty, and Illustrious Prince*.

TO THE NOBILITY & GENTRY.

DUKE, DUCHESS.

Sup.—To His Grace the Duke [Her Grace the Duchess] of Buckingham.

Comm.—My Lord Duke [Madam].

Con.—I have the honour to be, My Lord Duke, [Madam], Your Grace's most devoted and obedient [most obedient and most humble] Servant.

The *eldest* Sons of Dukes are, by the courtesy of England, styled *Marquesses*, though usually distinguished by their Father's *second* title, whether it be that of Marquess or Earl.

The formal style of Duke is *Most High, Potent, and Noble Prince*.

MARQUESS, MARCHIONESS.

Sup.—To the Most Honourable the Marquess [Marchioness] of Lansdowne.

Comm.—My Lord Marquess [Madam].

Con.—I have the honour to be, My Lord Marquess, Your Lordship's [Madam, Your Ladyship's] most obedient and most humble Servant.

The formal style of Marquess is *Most Noble and Potent Prince*.

The *eldest* Sons of Marquesses are styled *Earls*.

When a Title is taken from the name of a *Place*, as *Harewood, &c.*, we say, "The Marquess of, The Earl of *Harewood*;" when from a *Family* name, as *Townsend, Stanhope, &c.*, "The Marquess *Townsend*, The Earl *Stanhope*."

In addressing all below the rank of *Duchess*, who have the title of *Lady*, tradesmen should use the words *My Lady*, instead of *Madam*; and servants and other persons in inferior stations, *May it please your Ladyship*.

EARL, COUNTESS.

Sup.—To the Right Honourable the Earl [Countess] of Derby.

Comm.—My Lord [Madam].

Con.—I have the honour to be, My Lord, Your Lordship's [Madam, Your Ladyship's] most obedient and very humble Servant.

The *eldest* Sons of Earls are styled *Viscounts*.

All the Sons of Dukes and Marquesses, and the *eldest* Sons of Earls, have the title of *Lord* and *Right Honourable*; and their wives are addressed accordingly.

The Daughters of Dukes, Marquesses, and Earls, are styled *Ladies*, and addressed *Right Honourable Lady*, with the addition of the Christian name; and should they marry a person of inferior rank (*not being a peer of the realm*), they still retain their title and precedence, changing only their surname; if a peer of the realm, their title and precedence are merged in his, notwithstanding they may have been superior before marriage.

The *younger* Sons also of Dukes and Marquesses are styled *Lords*, and addressed *Right Honourable Lord*, with the Christian name added. Their Wives have the title of *Lady*; and, unless superior to the husband in rank, take *his* Christian name instead of *their own*.

Sup.—To the Honourable Henry Grey Bennett, M.P.
Comm.—Sir.

Con.—I have the honour to be, Sir, Your most obedient and very humble Servant.

When the Daughter of a Viscount, or a Baron, marries, she takes the name of her husband, reserving the title of *Honourable*. Thus, if she marry a Baronet or a Knight, she must be addressed *The Honourable Lady*; if a Commoner, *The Honourable Mrs.*

BARONET AND HIS WIFE.

Comm.—Sir [Madam].

Con.—I have the honour to be, Sir, Your most humble and obedient [Madam, Your Ladyship's most obedient and very humble] Servant.

KNIGHT AND HIS WIFE.

Sup.—To Sir Peter Laurie [Lady Laurie].
Comm. and Con. as last above.

The title of Knight is added only in formal documents; and in addressing familiarly a Baronet or a Knight, we must add the Christian name to *Dear Sir*, thus, "Dear Sir John, Dear Sir James."

The Widow of any person of rank, down to Knight, inclusive, marrying an untitled person, retains the title and name of her former husband: but marrying a person of rank *higher than, or equal to*, that of her former husband, she assumes *his* title and name.

ESQUIRE.

This title is now given to every man of respectability; but persons entitled to superior consideration, are distinguished by " &c. &c. &c." added to the superscription; and it is deemed more respectful to write the word *Esquire* at full length.

The Wives of Gentlemen, where several of the same family are married, are distinguished by the Christian name of their husbands.

Privy Counsellors have the title of *Right Honourable*, which is prefixed to their name, thus,

Sup.—To the Right Honourable James Abercromby, M.P.

OF THE CORONETS

BY WHICH PRINCES OF THE BLOOD ROYAL, AND THE DIFFERENT CLASSES OF THE NOBILITY, ARE DISTINGUISHED.

The *Prince of Wales*, as eldest Son of the King of Great Britain, is distinguished by a plume of three ostrich feathers, enclosed within a coronet of the ancient princes of Wales. Under it, in a scroll, is the motto '*Ich dien*,' which in the German or old Saxon language, signifies, *I serve*. This device was first taken by Edward the Black Prince, after the battle of Cressy, in 1346; where having vanquished John, king of Bohemia, with his own hand, he took from his head such a plume, and wore it himself.

The coronet of all the *Princes*, immediate sons or brothers of the kings of Great Britain, is a circle of gold, bordered with ermine, surmounted with four fleurs-de-lis, and as many crosses-patee alternately.

The coronet of the *Princesses* of Great Britain is a circle of gold, bordered with ermine, and composed of crosses patee, fleurs-de-lis, and strawberry leaves. It is surmounted by a cap of crimson velvet, with a tuft and tassel of gold.

A *Duke's* coronet is a circle of embossed gold, bordered with ermine, and set round with eight large strawberry leaves. It is surmounted by a cap of crimson velvet, with a tuft and tassel of gold.

A *Marquess's* coronet is a circle of embossed gold, bordered with ermine, set round with four strawberry leaves, and as many pearls on low pyramidal points, of

equal height, placed alternately, with a cap and tassel as before.

An *Earl's* coronet is a circle of embossed gold, bordered with ermine, with eight high pyramidal points, on the tops of which are as many large pearls, placed alternately, with eight strawberry leaves on lower points; cap and tassel as before.

A *Viscount's* coronet is a circle of plain gold, bordered with ermine, with sixteen large pearls set close together on the rim; cap and tassel.

A *Baron's* coronet is a circle of plain gold, bordered with ermine, and six pearls, set at equal distances (four of which only are seen on engravings), with the crimson velvet cap and gold tassel, as before.

The *eldest Sons of Peers*, above the degree of a baron, bear their father's arms and supporters differenced with a label; and use the coronet appertaining to their father's second title. All the *younger sons* bear their father's arms with proper differences, but without coronets.

The *Archbishops* and *Bishops* of England and Ireland surmount their armorial ensigns with a mitre, which is a round cap of gold pointed and cleft at the top, from which hang two blue pendants fringed with gold; with this difference, that the bishop's mitre is surrounded only with an embossed fillet of gold; whereas the archbishop's issues out of a ducal coronet.

PRIVILEGES, &c. OF THE PEERS.

The degrees of nobility in the United Kingdom of Great Britain and Ireland are five, viz. *Dukes, Marquises, Earls, Viscounts, and Barons*: to which may properly be added a sixth, viz. the *Archbishops and Bishops*, who, as spiritual lords, are entitled to a seat in the House of Peers, and possess for their lives all the faculties and privileges of the peerage. The principal of these privileges are as follow:—

1. That they are free from all *arrest for debts*, as being the king's hereditary counsellors. Therefore a peer cannot be outlawed in any civil action, and no *attachment* lies against his person. For the same reason they are exempt from attending *courts leet*, or *sheriff's turns*; or, in cases of riot, attending the *posse comitatus*.

2. In criminal cases they are only tried by their peers, who give their verdict, not upon oath as other juries, but upon their *honour*: and then a court is fitted up for the purpose in the middle of Westminster Hall, at the king's charge.

3. To secure the *honour* of, and prevent the spreading of any *scandal* upon peers, or any great officers of the realm, by reports, there is an express law, called *scandalum magnatum*, by which any man convicted of making a scandalous report against a peer of the realm (though true), is condemned to an *arbitrary fine*, and to remain in custody till the same be paid.

4. Upon any great trial in a court of justice, a peer may come into the court, and sit there uncovered. But no peer can be covered in the royal presence without permission for that purpose, except Lord Kingsale, who enjoys that privilege by hereditary right, originally granted to his ancestor, Baron de Coureay, by King John.

MARRIED DAUGHTERS OF PEERS.

1. The Daughters of Dukes, Marquises, or Earls, who, having married Commoners, are distinguished by the title of *Right Honourable Lady* prefixed to their own Christian names. 2. The Daughters of Viscounts, or Barons, who, having married Knights, or Baronets, are distinguished by the title of *Honourable Lady* prefixed to their own Christian names. 3. The Daughters of Viscounts, or Barons, married to Commoners, are distinguished by the title of *Honourable Mrs.* prefixed to their names.

THE ABUSE OF RICHES IS A CURSE; THEIR USE, A BLESSING.
